

Digital Literacy Study Series · Level 1

Digital Literacy

Foundations: Computing Fundamentals, Content Creation, and Living Online

Raqamli savodxonlik asoslari: hisoblash texnikasi, kontent yaratish va internetda xavfsiz yashash

Bilingual Edition · English – O'zbek

About This Book / Kitob haqida

This book is an original, independently written study guide for learners preparing for a foundational digital-literacy certification. It is organized into three parts — Computing Fundamentals, Key Applications and Content Creation, and Living Online — each building the practical knowledge needed to use computers confidently and responsibly.

Ushbu kitob asosiy raqamli savodxonlik sertifikatiga tayyorlanayotgan o'quvchilar uchun mustaqil ravishda yozilgan original o'quv qo'llanmadir. U uchta qismga bo'lingan — Hisoblash asoslari, Asosiy dasturlar va kontent yaratish, hamda Internetda yashash — har biri kompyuterlardan ishonchli va mas'uliyatli foydalanish uchun zarur bo'lgan amaliy bilimlarni shakllantiradi.

Every topic is presented in English with a full Uzbek translation beneath it, so the material can be studied in either language or both together. Diagrams, tables, review questions, and a glossary support active learning and self-testing throughout.

Har bir mavzu ingliz tilida taqdim etiladi va uning ostida to'liq o'zbekcha tarjimasi beriladi, shunda materialni istalgan tilda yoki ikkalasida birga o'rganish mumkin. Diagrammalar, jadvallar, takrorlash savollari va lug'at butun kitob davomida faol o'rganish va o'z-o'zini sinashni qo'llab-quvvatlaydi.

How to Use This Book / Kitobdan qanday foydalanish

Read each subsection's English paragraph first, then its Uzbek translation, comparing the two to build vocabulary in both directions. After finishing a part, attempt its Review Questions from memory before checking the Answer Key near the end of the book — testing recall first is far more effective for long-term learning than simply re-reading.

Har bir kichik bo'limning avval ingliz tilidagi abzatsini, so'ng uning o'zbekcha tarjimasini o'qing, ikkalasini solishtirib, ikki yo'nalishda ham lug'at boyligini oshiring. Har bir qismni tugatgandan so'ng, kitob oxiridagi Javoblar kalitini tekshirishdan oldin uning Takrorlash savollariga xotiradan javob berishga harakat qiling — avval eslashni sinash uzoq muddatli o'rganish uchun shunchaki qayta o'qishdan ancha samaraliroqdir.

Part D brings the material together through practical exercises, case studies, quick-reference tables, and an extended practice quiz. Working through Part D after completing Parts A, B, and C is the best way to check whether the concepts have become usable skills rather than facts memorized for a test.

D qism materialni amaliy mashqlar, vaziyat tahlillari, tezkor ma'lumotnoma jadvallari va kengaytirilgan test savollari orqali birlashtiradi. A, B va C qismlarini tugatgandan so'ng D qismi bo'yicha ishlash tushunchalar imtihon uchun yodlangan faktlarga emas, balki amalda qo'llash mumkin bo'lgan ko'nikmalarga aylanganini tekshirishning eng yaxshi usulidir.

Contents / Mundarija

PART A — Computing Fundamentals / Hisoblash asoslari

A.1 Types of Computing Devices / Qurilma turlari

A.2 Core Hardware Components / Apparat qismlari

A.3 Operating Systems and the User Interface / Operatsion tizimlar

A.4 File and Folder Management / Fayl va papkalarni boshqarish

Review Questions A

PART B — Key Applications and Content Creation / Asosiy dasturlar

B.1 Creating Basic Documents and Presentations

B.2 Working with Text, Objects and Media

B.3 Introduction to Spreadsheets / Jadval dasturlariga kirish

B.4 Referencing and Attribution Practices

B.5 Saving and Backing Up Work

B.6 Fundamental Printing Concepts

Review Questions B

PART C — Living Online / Internetda yashash

C.1 Understanding the Internet and Browsers

C.2 Email Fundamentals and Etiquette

C.3 Online Safety and Digital Citizenship

C.4 Managing Your Digital Footprint

Review Questions C

PART D — Practical Exercises and Quick Reference / Amaliy mashqlar

D.1 Practical Exercises / D.2 Keyboard Shortcuts / D.3 Print Checklist

Answer Key / Javoblar kaliti

Glossary / Lug'at

PART E — Final Assessment / Yakuniy baholash

Closing Notes and Next Steps / Yakuniy so'z

Preface

So'z boshi

Digital skills are often taught as a list of button locations to memorize, which fades quickly once the exam is over. This book instead tries to explain the reasoning behind each habit — why a backup matters, why a citation matters, why a strong password matters — because understanding the reason makes the habit far more likely to stick once the interface of any particular app inevitably changes.

Raqamli ko'nikmalar ko'pincha yodlab olinadigan tugmalar joylashuvi ro'yxati sifatida o'rgatiladi, bu esa imtihon tugashi bilan tezda unutiladi. Ushbu kitob esa har bir odat ortidagi mantiqni tushuntirishga harakat qiladi — nega xaxira nusxa muhim, nega iqtibos muhim, nega kuchli parol muhim — chunki sababni tushunish har qanday aniq ilova interfeysi muqarrar o'zgarganda ham odatning saqlanib qolishini ancha ehtimolli qiladi.

Wherever possible, examples use realistic, everyday situations rather than abstract descriptions, in the hope that the material feels immediately useful rather than purely theoretical.

Iloji boricha, misollarda mavhum tavsiflar o'rniga real, kundalik vaziyatlardan foydalanilgan, shunda material sof nazariy emas, balki darhol foydali his qilinishiga umid qilinadi.

Part A — Computing Fundamentals

A qism — Hisoblash asoslari

Part Objectives / Qism maqsadlari

- A.1 Identify common types of computing devices
- *A.1 Hisoblash qurilmalarining umumiy turlarini aniqlash*
- A.2 Understand core hardware components and their roles
- *A.2 Asosiy apparat qismlari va ularning vazifalarini tushunish*
- A.3 Navigate an operating system and its user interface
- *A.3 Operatsion tizim va uning interfeysida ishlash*
- A.4 Organize files and folders effectively
- *A.4 Fayl va papkalarni samarali tashkil etish*

A.1 Types of Computing Devices / A.1 Hisoblash qurilmalari turlari

Computing devices come in many forms, each suited to different tasks. Desktop computers offer the most power and the largest screens for a fixed location, such as an office or a home study. Laptops trade some power for portability, allowing work to continue away from a desk. Tablets and smartphones prioritize touch-based interaction and mobility above all, making them ideal for quick tasks, communication, and consuming media.

Hisoblash qurilmalari ko'plab shakllarda bo'ladi, har biri turli vazifalarga mos keladi. Statsionar kompyuterlar ofis yoki uy kabi belgilangan joy uchun eng katta quvvat va eng katta ekranlarni taklif etadi. Noutbuklar esa ko'chma bo'lish uchun quvvatning bir qismidan voz kechadi va stoldan uzoqda ishlashni davom ettirish imkonini beradi. Planshet va smartfonlar esa hamma narsadan ko'ra teginish orqali boshqarish va harakatchanlikka ustuvorlik beradi, bu esa ularni tezkor vazifalar, aloqa va media iste'mol qilish uchun ideal qiladi.

Types of Computing Devices / Hisoblash qurilmalari turlari

Choosing the right device depends on the task: a long report is usually easier to write on a full keyboard, while checking a quick message is often faster on a phone. Many people now use a combination of devices throughout the day, syncing their files between them through cloud storage.

To'g'ri qurilmani tanlash vazifaga bog'liq: uzun hisobotni odatda to'liq klaviaturada yozish osonroq, tezkor xabarni tekshirish esa ko'pincha telefonda tezroq bo'ladi. Ko'pchilik hozirda kun davomida bir nechta qurilmalar kombinatsiyasidan foydalanadi, fayllarini ular orasida bulutli xotira orqali sinxronlashtiradi.

A.2 Core Hardware Components / A.2 Asosiy apparat qismlari

Core Hardware Components / Asosiy apparat qismlari

Component / Komponent	Role / Vazifasi
CPU (Central Processing Unit)	Kompyuterning "miyasi" — barcha buyruqlarni bajaradi / The "brain" that executes instructions
RAM (Random Access Memory)	Dastur ishlayotganda ma'lumotni vaqtincha saqlaydi; o'chirilganda tozalanadi / Temporary working memory, cleared on shutdown
Storage (SSD / HDD)	Fayllarni doimiy saqlaydi, hatto o'chirilgandan keyin ham / Permanently stores files, even when powered off
Input devices	Ma'lumot kiritish uchun — klaviatura, sichqoncha, mikrofon / Keyboard, mouse, microphone, touch screen
Output devices	Natijani ko'rsatish uchun — ekran, printer, karnay / Monitor, printer, speakers

More RAM generally allows a device to run more programs smoothly at the same time, while more storage allows it to hold more files, photos, and applications. Understanding these basic components helps when choosing a device or troubleshooting why it feels slow.

Ko'proq RAM odatda qurilmaga bir vaqtning o'zida ko'proq dasturlarni muammosiz ishga tushirish imkonini beradi, ko'proq xotira esa ko'proq fayl, foto va ilovalarni saqlash imkonini beradi. Ushbu asosiy komponentlarni tushunish qurilmani tanlashda yoki uning nega sekin ishlayotganini aniqlashda yordam beradi.

A.3 Operating Systems and the User Interface / A.3 Operatsion tizimlar va foydalanuvchi interfeysi

The operating system (OS) is the software that manages a device's hardware and provides the environment in which other programs run. Common examples include Windows and macOS for desktops and laptops, and Android and iOS for mobile devices. Although they look different, most operating systems share common concepts: a home screen or desktop, a way to launch programs, a way to manage running windows or apps, and system settings for adjusting things like display, sound, and network connections.

Operatsion tizim (OT) — bu qurilmaning apparat qismlarini boshqaradigan va boshqa dasturlar ishlaydigan muhitni ta'minlaydigan dasturiy ta'minot. Statsionar va noutbuklar uchun Windows va macOS, mobil qurilmalar uchun esa Android va iOS keng tarqalgan misollardir. Tashqi ko'rinishi har xil bo'lsa-da, ko'pchilik operatsion tizimlar umumiy tushunchalarga ega: bosh ekran yoki ish stoli, dasturlarni ishga tushirish usuli, ochiq oyna yoki ilovalarni boshqarish usuli, hamda displey, ovoz va tarmoq ulanishlari kabi narsalarni sozlash uchun tizim sozlamalari.

Learning to navigate one operating system's interface makes it much easier to adapt to another, because the underlying logic — icons represent programs or files, menus reveal further options, and settings are grouped by category — remains largely the same across platforms.

Bitta operatsion tizim interfeysida ishlashni o'rganish boshqasiga moslashishni ancha osonlashtiradi, chunki asosiy mantiq — ikonkalar dastur yoki faylni bildiradi, menyular qo'shimcha imkoniyatlarni ochadi, sozlamalar esa toifalarga guruhlangan — turli platformalarda deyarli bir xil bo'lib qoladi.

A.4 File and Folder Management / A.4 Fayl va papkalarni boshqarish

A folder (sometimes called a directory) is a container used to group related files together, similar to a folder in a physical filing cabinet. Organizing files into a clear folder structure — for example, separate folders for Work, School, Photos, and Backup — makes it far easier to find a specific file later and reduces the chance of losing or overwriting important work.

Papka (ba'zan direktoriya deb ham ataladi) — bu jismoniy fayl shkafidagi papkaga o'xshab, bog'liq fayllarni birgalikda guruhlash uchun ishlatiladigan konteyner. Fayllarni aniq papka tuzilmasiga tashkil etish — masalan,

Ish, Maktab, Rasmlar va Zaxira uchun alohida papkalar — kelajakda kerakli faylni topishni ancha osonlashtiradi va muhim ishni yo'qotish yoki ustidan yozib yuborish ehtimolini kamaytiradi.

File and Folder Structure / Fayl va papka tuzilishi

Good habits include giving files clear, descriptive names (rather than generic names like "Document1"), avoiding duplicate copies of the same file scattered across different folders, and periodically deleting or archiving files that are no longer needed.

Yaxshi odatlarga fayllarga aniq va tavsiflovchi nomlar berish ("Document1" kabi umumiy nomlar o'rniga), bir xil faylning turli papkalarga tarqalib ketgan nusxalaridan qochish, hamda endi kerak bo'lmagan fayllarni vaqti-vaqti bilan o'chirish yoki arxivlash kiradi.

A.5 Basic Troubleshooting / A.5 Nosozliklarni bartaraf etish asoslari

Even reliable devices occasionally behave unexpectedly. Before assuming something is seriously wrong, a few simple steps solve the majority of everyday problems: restarting the device (which clears temporary memory and stops any program stuck in a bad state), checking that all cables and connections are secure, confirming the device has enough free storage space, and checking for and installing pending software updates.

Ishonchli qurilmalar ham vaqti-vaqti bilan kutilmagan tarzda ishlashi mumkin. Biror narsa jiddiy buzilgan deb o'ylashdan oldin, bir nechta oddiy qadamlar kundalik muammolarning aksariyatini hal qiladi: qurilmani qayta ishga tushirish (bu vaqtinchalik xotirani tozalaydi va yomon holatda qotib qolgan dasturni to'xtatadi), barcha kabel va ulanishlar mahkam ekanligini tekshirish, qurilmada yetarli bo'sh xotira borligini tasdiqlash, hamda kutilayotgan dasturiy yangilanishlarni tekshirish va o'rnatish.

Common Problem / Muammo	First Step to Try / Birinchi urinib ko'rish kerak bo'lgan qadam
Program is frozen or unresponsive	Force-quit the program, or restart the device / Dasturni majburan yopish yoki qurilmani qayta ishga tushirish
Device is running slowly	Close unused programs and browser tabs; check available storage / Kerak bo'lmagan dastur va tab'larni yopish; bo'sh xotirani tekshirish
No internet connection	Restart the router; check Wi-Fi is switched on / Routerni qayta ishga tushirish; Wi-Fi yoqilganini tekshirish
Cannot find a saved file	Use the search function; check the Downloads and Documents folders / Qidiruv funksiyasidan foydalanish; Downloads va Documents papkalarini tekshirish

A.6 Digital Wellbeing and Screen Time / A.6 Raqamli farovonlik va ekran vaqti

Using computing devices effectively also means using them in a balanced way. Most modern operating systems include a built-in screen-time or digital-wellbeing feature that tracks how long each app is used per day and can set gentle reminders or limits. Simple habits — taking short breaks from the screen, turning off non-essential notifications, and keeping devices out of the bedroom at night — support both better focus during the day and better rest at night.

Hisoblash qurilmalaridan samarali foydalanish ularni muvozanatli tarzda ishlatishni ham anglatadi. Ko'pchilik zamonaviy operatsion tizimlarda har bir ilova kuniga qancha vaqt ishlatilganini kuzatuvchi va muloyim eslatma yoki cheklovlarni belgilashi mumkin bo'lgan o'rnatilgan ekran vaqti yoki raqamli farovonlik funksiyasi mavjud. Oddiy odatlar — ekrandan qisqa tanaffus olish, muhim bo'lmagan bildirishnomalarni o'chirish va kechqurun qurilmalarni yotoq xonasidan uzoqda saqlash — kun davomida yaxshi diqqat-e'tibor va kechasi yaxshi dam olishni qo'llab-quvvatlaydi.

This is especially relevant when studying: reviewing a screen-time report after a study session can reveal how much time was actually spent on the task versus switching to other apps, which is a useful, honest way to improve focus over time.

Bu ayniqsa o'qish paytida muhim: o'qish sessiyasidan keyin ekran vaqti hisobotini ko'rib chiqish vazifaga qancha vaqt sarflangani va boshqa ilovalarga necha marta o'tilganini ochib berishi mumkin, bu esa vaqt o'tishi bilan diqqatni yaxshilashning foydali va halol usulidir.

Life of a Document / Hujjatning hayot yo'li

A.7 Common Mistakes to Avoid / A.7 Ko'p uchraydigan xatolar

- Ignoring software updates for months, which leaves security gaps unpatched
- *Dasturiy yangilanishlarni oylab e'tiborsiz qoldirish, bu xavfsizlik bo'shliqlarini ochiq qoldiradi*
- Saving every file directly to the desktop instead of an organized folder
- *Har bir fayl ni tartibli papka o'rniga to'g'ridan-to'g'ri ish stoliga saqlash*
- Assuming a device problem is serious before trying a simple restart
- *Oddiy qayta ishga tushirishni sinab ko'rmasdan qurilma muammosi jiddiy deb o'ylash*

A.8 Comparing Popular Operating Systems / A.8 Mashhur operatsion tizimlarni solishtirish

System	Key Trait / Asosiy xususiyat
Windows	Widely used on desktops and laptops; broad software and hardware compatibility / Statsionar va noutbuklarda keng tarqalgan; keng dasturiy va apparat moslashuvi

System	Key Trait / Asosiy xususiyat
macOS	Runs only on Apple computers; known for design consistency / Faqat Apple kompyuterlarida ishlaydi; dizayn izchilligi bilan tanilgan
Android	Open, widely used on phones and tablets from many manufacturers / Ochiq, ko'plab ishlab chiqaruvchilarning telefon va planshetlarida keng tarqalgan
iOS / iPadOS	Runs only on Apple mobile devices; tightly integrated with other Apple products / Faqat Apple mobil qurilmalarida ishlaydi; boshqa Apple mahsulotlari bilan chambarchas bog'langan

No single operating system is universally "best" — the right choice depends on the software a person needs to run, the devices they already own, and personal preference for how the interface looks and feels.

Hech qanday operatsion tizim umumiy ma'noda "eng yaxshi" emas — to'g'ri tanlov odamga kerak bo'lgan dastur, u allaqachon egalik qiladigan qurilmalar va interfeysning ko'rinishi hamda his qilinishiga shaxsiy afzallikka bog'liq.

A.9 Comparing Cloud Storage Providers / A.9 Bulutli xotira xizmatlarini solishtirish

Provider / Xizmat	Notable Trait / Muhim xususiyat
OneDrive	Deeply integrated with Windows and Microsoft 365 / Windows va Microsoft 365 bilan chuqur integratsiyalashgan
Google Drive	Integrated with Gmail and Google's free office tools / Gmail va Google-ning bepul ofis vositalari bilan integratsiyalashgan
iCloud	Integrated with Apple devices and Photos / Apple qurilmalari va Photos bilan integratsiyalashgan
Dropbox	Cross-platform, often used for large shared team folders / Ko'p platformali, ko'pincha katta umumiy jamoa papkalari uchun ishlatiladi

Most of these services offer a limited amount of free storage and paid plans for more space; comparing free-tier limits is a practical first step before committing important files to any one provider.

Ushbu xizmatlarning aksariyati cheklangan miqdorda bepul xotira va ko'proq joy uchun pullik rejalarni taklif etadi; muhim fayllarni biror xizmatga topshirishdan oldin bepul rejalar chegarasini solishtirish amaliy birinchi qadamdir.

Review Questions A / A qism bo'yicha savollar

1. Name three types of computing devices and one advantage of each.
1. Uchta hisoblash qurilmasi turini va har birining bitta afzalligini ayting.
2. What is the difference between RAM and storage?
2. RAM va xotira (storage) o'rtasidagi farq nima?
3. What is the role of an operating system?
3. Operatsion tizimning vazifasi nima?
4. Why is it helpful to organize files into folders?
4. Fayllarni papkalarga tashkil etish nima uchun foydali?

Part B — Key Applications and Content Creation

B qism — Asosiy dasturlar va kontent yaratish

Part Objectives / Qism maqsadlari

- B.1 Create basic documents and presentations
 - *B.1 Oddiy hujjat va taqdimotlar yaratish*
- B.2 Use basic spreadsheet concepts
 - *B.2 Jadval dasturlarining asosiy tushunchalaridan foydalanish*
- B.3 Understand accepted referencing and attribution practices
 - *B.3 Manba ko'rsatish va muallifga havola qilish qoidalarini bilish*
- B.4 Save and back up work
 - *B.4 Ishni saqlash va zaxira nusxasini olish*
- B.5 Understand fundamental printing concepts
 - *B.5 Chop etishning asosiy tushunchalarini bilish*

B.1 Creating Basic Documents and Presentations / B.1 Hujjat va taqdimot yaratish

B.1.1 Starting a New File / B.1.1 Yangi fayl yaratish

Most office programs open with a start screen that lets you begin from a blank file or a ready-made template. A template is a pre-built layout with sample text, colors, and formatting already applied, which saves time when a document needs to follow a standard structure, such as a resume, a report, an invoice, or a certificate.

Ko'pchilik ofis dasturlari ochilganda bo'sh fayldan yoki tayyor shablondan boshlash imkonini beruvchi boshlang'ich ekranni ko'rsatadi. Shablon — bu namuna matn, ranglar va formatlash allaqachon qo'llangan tayyor tuzilma bo'lib, rezyume, hisobot, hisob-faktura yoki sertifikat kabi standart tuzilishga ega hujjat kerak bo'lganda vaqtini tejaydi.

Word processing programs (such as Word or Google Docs) are built mainly for text-based documents like letters, reports, and essays: their tools focus on paragraphs, headings, and page layout. Presentation programs (such as PowerPoint or Google Slides) are built to display information on a series of slides, usually to support a spoken talk: their tools focus on slide layout, transitions, and visual emphasis. Spreadsheet programs, by comparison, are built around rows, columns, and formulas for numeric data. Picking the right category of program for the task is the first step toward effective content.

Matn muharrirlari (masalan, Word yoki Google Docs) asosan xat, hisobot va insho kabi matnga asoslangan hujjatlar uchun mo'ljallangan: ularning vositalari abzatslar, sarlavhalar va sahifa tartibiga qaratilgan. Taqdimot dasturlari (masalan, PowerPoint yoki Google Slides) esa ma'lumotni bir qator slaydlarda ko'rsatish uchun mo'ljallangan, odatda og'zaki nutqni qo'llab-quvvatlash uchun: ularning vositalari slayd tartibi, o'tishlar va vizual urg'uga qaratilgan. Jadval dasturlari esa raqamli ma'lumotlar uchun qator, ustun va formulalar atrofida qurilgan. Vazifaga mos dastur turkumini tanlash samarali kontent yaratishning birinchi qadamidir.

Choosing the Right Tool / To'g'ri vositani tanlash

B.1.2 Basic Formatting Tools / B.1.2 Asosiy formatlash vositalari

Once a file is open, the ribbon or toolbar at the top of the window provides the main tools for entering and formatting content. Common formatting options include changing the font and its size, applying bold, italic, or underline, adjusting text alignment (left, center, right, or justified), setting line and paragraph spacing, and adding bullet points or numbered lists to organize information clearly.

Fayl ochilgandan so'ng, oyna tepasidagi lenta yoki asboblari paneli kontentni kiritish va formatlash uchun asosiy vositalarni taqdim etadi. Odatiy formatlash imkoniyatlariga shrift va uning o'lchamini o'zgartirish, qalin, kursiv yoki tagiga chizilgan matn qo'llash, matn tekislashini (chapga, markazga, o'ngga yoki ikki tomonlama) sozlash, qator va abzats oralig'ini belgilash, hamda ma'lumotni aniq tartibga solish uchun ro'yxat belgilari yoki raqamlangan ro'yxatlar qo'shish kiradi.

In presentation programs, each new slide can use a layout — a pre-set arrangement of placeholders for a title, body text, or images — and a design theme, which applies a consistent color palette and font pairing across every slide. Choosing a layout and theme before adding content keeps a presentation visually consistent and easier for an audience to follow.

Taqdimot dasturlarida har bir yangi slayd uchun tartib (layout) — sarlavha, asosiy matn yoki rasmlar uchun oldindan belgilangan joy egallovchi tuzilma — hamda dizayn mavzusi (theme) tanlanishi mumkin, bu esa barcha slaydlarda izchil rang palitrasi va shrift juftligini qo'llaydi. Kontent qo'shishdan oldin tartib va mavzuni tanlash taqdimotni vizual jihatdan izchil va tomoshabin uchun tushunarliroq qiladi.

Note: Saving your own formatting choices as a custom template can save significant time on future documents that need the same look and structure.

Eslatma: *O'zingizning formatlash tanlovlaringizni maxsus shablon sifatida saqlash, xuddi shunday ko'rinish va tuzilishga ega bo'lgan kelajakdagi hujjatlar uchun sezilarli vaqtni tejaydi.*

B.1.3 Working with Text, Objects, and Media / B.1.3 Matn, obyekt va media bilan ishlash

Beyond plain text, documents and presentations often include tables (for organizing data into rows and columns), images (photos, icons, or diagrams that support the message), and charts (visual summaries of numeric data). Inserting these elements is usually done from an Insert tab, and once placed, an object can be resized, repositioned, and wrapped with text around it.

Oddiy matndan tashqari, hujjat va taqdimotlarga ko'pincha jadvallar (ma'lumotni qator va ustunlarga tartiblash uchun), rasmlar (xabarni qo'llab-quvvatlovchi foto, ikonka yoki diagrammalar) va diagrammalar (raqamli ma'lumotlarning vizual xulosasi) kiritiladi. Bu elementlarni kiritish odatda Insert (Kiritish) bo'limi orqali amalga oshiriladi, joylashtirilgandan so'ng esa obyekt o'lchamini o'zgartirish, joyini almashtirish va uning atrofida matnni o'rab chiqish mumkin.

B.2 Introduction to Spreadsheets / B.2 Jadval dasturlariga kirish

A spreadsheet program (such as Excel or Google Sheets) organizes data into a grid of rows and columns. Each box in the grid is called a cell, and every cell has a unique address made from its column letter and row number, such as B3. Spreadsheets are commonly used for budgets, schedules, lists, and any task that involves calculations on numeric data.

Jadval dasturi (masalan, Excel yoki Google Sheets) ma'lumotni qator va ustunlardan iborat to'r shaklida tashkil etadi. To'rdagi har bir katak yacheyka (cell) deb ataladi va har bir yacheykaning o'ziga xos manzili uning ustun harfi va qator raqamidan iborat bo'ladi, masalan, B3. Jadvallar odatda byudjet, jadval-reja, ro'yxatlar va raqamli ma'lumotlar bilan hisob-kitob talab qiladigan har qanday vazifa uchun ishlatiladi.

B.2.1 Entering Data and Basic Formulas / B.2.1 Ma'lumot kiritish va oddiy formulalar

A cell can hold text, a number, or a formula. A formula always begins with an equals sign (=) and tells the program to calculate a result, such as =A1+A2 to add the values in two cells, or =SUM(A1:A10) to add a whole range of cells at once. Once entered, a formula updates its result automatically whenever the numbers it depends on change.

Yacheyka matn, raqam yoki formulani saqlashi mumkin. Formula har doim teng belgisi (=) bilan boshlanadi va dasturga natijani hisoblashni buyuradi, masalan, ikkita yacheykadagi qiymatlarni qo'shish uchun =A1+A2, yoki butun bir yacheykalar diapazonini birdaniga qo'shish uchun =SUM(A1:A10). Kiritilgandan so'ng, formula unga bog'liq raqamlar o'zgarganda natijani avtomatik yangilaydi.

B.2.2 Common Everyday Uses / B.2.2 Kundalik hayotda keng tarqalgan foydalanish

- Tracking a personal or family budget
- *Shaxsiy yoki oilaviy byudjetni kuzatish*
- Building a simple class or work schedule
- *Oddiy dars yoki ish jadvalini tuzish*
- Keeping an inventory or contact list
- *Inventar yoki kontaktlar ro'yxatini yuritish*
- Calculating totals, averages, and percentages automatically
- *Umumiy summa, o'rtacha qiymat va foizlarni avtomatik hisoblash*

Basic charts can also be generated directly from spreadsheet data, turning a table of numbers into a bar, line, or pie chart with just a few clicks — a useful way to spot trends that are harder to see in plain rows of numbers.

Jadval ma'lumotlaridan bevosita oddiy diagrammalar ham yaratish mumkin, bu esa bir necha bosish orqali raqamlar jadvalini ustunli, chiziqli yoki doiraviy diagrammaga aylantiradi — bu oddiy raqam qatorlarida ko'rish qiyinroq bo'lgan tendensiyalarni payqashning foydali usulidir.

B.2.3 Worked Example: A Simple Budget / B.2.3 Amaliy misol: oddiy byudjet

The table below shows what a very simple monthly budget spreadsheet might contain. In a real spreadsheet, the Total row would use a SUM formula rather than a typed-in number, so it updates automatically if any expense changes.

Quyidagi jadval juda oddiy oylik byudjet jadvalida nima bo'lishi mumkinligini ko'rsatadi. Haqiqiy jadvalda Jami qatori kiritilgan raqam o'rniga SUM formulasidan foydalanadi, shunda har qanday xarajat o'zgarganda u avtomatik yangilanadi.

Category / Toifa	Amount / Miqdor
Rent / Ijara	\$450
Groceries / Oziq-ovqat	\$180
Transport / Transport	\$60
Utilities / Kommunal	\$90
Savings / Jamg'arma	\$120
Total (=SUM) / Jami	\$900

B.2.4 Relative and Absolute References / B.2.4 Nisbiy va mutlaq havolalar

By default, a cell reference in a formula is relative: if the formula =A1+B1 is copied down to the next row, it automatically adjusts to =A2+B2. Sometimes a formula needs to always point at one fixed cell no matter where it is copied — for example, a tax rate stored in a single cell used across many rows. Adding a dollar sign, as in \$A\$1, makes that reference absolute so it does not shift when copied.

Odatiy holatda, formuladagi yacheyka havolasi nisbiy bo'ladi: agar =A1+B1 formulasi keyingi qatorga nusxalansa, u avtomatik ravishda =A2+B2 ga o'zgaradi. Ba'zan formula qayerga nusxalanishidan qat'i nazar doimo bitta belgilangan yacheykaga ishora qilishi kerak bo'ladi — masalan, ko'plab qatorlarda ishlatiladigan bitta yacheykada saqlangan soliq stavkasi. \$A\$1 kabi dollar belgisini qo'shish havolani mutlaq qiladi, shunda u nusxalanganda o'zgarmaydi.

B.3 Referencing and Attribution Practices / B.3 Manba ko'rsatish va muallifga havola qilish

When you use someone else's words, ideas, data, or images in your own work, it is important to give them proper credit. This practice is called attribution or referencing, and it applies whether the original source is a book, a website, a photograph, a dataset, or a video.

O'z ishingizda boshqa bironing so'zlari, g'oyalari, ma'lumotlari yoki rasmlaridan foydalanganingizda, ularga to'g'ri havola berish muhimdir. Bu amaliyot manba ko'rsatish yoki attribution deb ataladi va asl manba kitob, veb-sayt, fotosurat, ma'lumotlar to'plami yoki video bo'lishidan qat'i nazar qo'llaniladi.

B.3.1 Why Referencing Matters / B.3.1 Manba ko'rsatish nima uchun muhim

Proper referencing gives credit to the original creator, allows readers to find and verify the source of information, strengthens the credibility of your own work by showing it is grounded in real evidence, and helps avoid plagiarism — presenting someone else's work as if it were your own. Plagiarism is considered both dishonest and, in many cases, a violation of copyright law, and in academic or professional settings it can carry serious consequences.

To'g'ri manba ko'rsatish asl muallifga tegishli hurmatni bildiradi, o'quvchilarga ma'lumot manbasini topish va tekshirish imkonini beradi, ishingiz haqiqiy dalillarga asoslanganini ko'rsatib uning ishonchligini mustahkamlaydi, hamda plagiat — ya'ni boshqa bironing ishini o'zinikidek taqdim etishning oldini olishga

yordam beradi. Plagiat nafaqat axloqiy jihatdan noto'g'ri, balki ko'p hollarda mualliflik huquqini buzish hisoblanadi, akademik yoki professional muhitda esa jiddiy oqibatlarga olib kelishi mumkin.

B.3.2 Common Referencing Elements / B.3.2 Manba ko'rsatishning umumiy elementlari

- Author or creator name
- *Muallif yoki ijodkor ismi*
- Title of the work
- *Asar nomi*
- Publication date
- *Nashr sanasi*
- Source or publisher (website, journal, publishing house)
- *Manba yoki nashriyot (veb-sayt, jurnal, nashriyot uyi)*
- URL or location where the material was accessed, if applicable
- *Agar mavjud bo'lsa, material olingan URL yoki joylashuv*
- Date the material was accessed (important for websites, which can change)
- *Materialga kirilgan sana (o'zgarishi mumkin bo'lgan veb-saytlar uchun muhim)*

Anatomy of a Citation / Iqtibosning tarkibi

B.3.3 Citation Styles / B.3.3 Iqtibos keltirish uslublari

Different fields and institutions require different citation styles — APA is common in the social sciences, MLA in the humanities, and Chicago in history and publishing — but the underlying goal is always the same: to clearly and consistently show where each piece of information came from, in a format the reader can rely on throughout the whole document.

Turli soha va muassasalar turli iqtibos keltirish uslublarini talab qiladi — APA ijtimoiy fanlarda, MLA gumanitar fanlarda, Chicago esa tarix va nashriyot sohasida keng tarqalgan — ammo asosiy maqsad har doim bir xil: har bir ma'lumot qayerdan olinganini aniq va izchil tarzda, o'quvchi butun hujjat davomida ishonishi mumkin bo'lgan formatda ko'rsatish.

B.3.4 Fair Use and Permissions / B.3.4 Adolatli foydalanish va ruxsat

Giving credit does not automatically make every use of someone else's work acceptable. Some material is protected by copyright and may require the creator's explicit permission before it can be reused, especially for

commercial purposes. Content marked as public domain or released under an open license (such as Creative Commons) is generally freer to reuse, but it should still be credited.

Manba ko'rsatish boshqa bironing ishidan har qanday foydalanishni avtomatik ravishda ma'qul qilmaydi. Ba'zi materiallar mualliflik huquqi bilan himoyalangan bo'lib, ayniqsa tijorat maqsadida qayta foydalanishdan oldin muallifning aniq ruxsatini talab qilishi mumkin. Public domain (ommaviy mulk) deb belgilangan yoki ochiq litsenziya (masalan, Creative Commons) ostida chiqarilgan kontentdan foydalanish odatda erkinroq, lekin baribir unga havola berilishi kerak.

B.4 Saving and Backing Up Work / B.4 Ishni saqlash va zaxira nusxasini olish

Saving regularly protects your work from being lost due to a power outage, a program crash, or an accidental closure. Most programs offer a Save option for updating the current file in place, and a Save As option for creating a new file — allowing you to change its name, its location, or its format.

Muntazam saqlash ishingizni elektr uzilishi, dastur ishlamay qolishi yoki tasodifan yopilib qolishi natijasida yo'qolishidan himoya qiladi. Ko'pchilik dasturlarda joriy faylni o'z o'rnida yangilash uchun Save (Saqlash), yangi fayl yaratish — ya'ni uning nomini, joylashuvini yoki formatini o'zgartirish imkonini beruvchi Save As (Nomlab saqlash) imkoniyati mavjud.

B.4.1 File Formats / B.4.1 Fayl formatlari

A file's format, shown by its extension, determines which programs can open it and how it will display.

Faylning formati, uning kengaytmasi orqali ko'rsatiladi va qaysi dasturlar uni ocha olishini hamda u qanday ko'rinishda namoyon bo'lishini belgilaydi.

Format	Ta'rif / Description
.docx / .odt	Word processing document / Matn hujjati
.pptx / .odp	Presentation file / Taqdimot fayli
.xlsx / .ods	Spreadsheet file / Jadval fayli
.pdf	Fixed-layout document for sharing / Ulashish uchun qat'iy tartibli hujjat
.jpg / .png	Image files / Rasm fayllari

Saving a document as a PDF, for example, preserves its exact layout so it looks the same on any device or printer, which is especially useful for sharing a final version that should not be edited further.

Masalan, hujjatni PDF formatida saqlash uning aniq tuzilishini saqlab qoladi, shunda u har qanday qurilma yoki printerda bir xil ko'rinishda bo'ladi — bu esa endi tahrirlanmasligi kerak bo'lgan yakuniy versiyani ulashish uchun ayniqsa foydalidir.

B.4.2 Backing Up Your Work / B.4.2 Ishingizning zaxira nusxasini olish

A backup is a separate copy of a file stored in a different location than the original — for example, on an external drive or in cloud storage such as OneDrive, Google Drive, or iCloud. Cloud storage has the added benefit of automatic, continuous saving as you work, and it lets you access the same file from more than one device.

Zaxira nusxa — bu faylning asl nusxasidan boshqa joyda saqlanadigan alohida nusxasi, masalan, tashqi diskda yoki OneDrive, Google Drive yoki iCloud kabi bulutli xotirada. Bulutli xotiraning qo'shimcha afzalligi shundaki, u ish jarayonida avtomatik va uzluksiz saqlashni ta'minlaydi hamda bir xil faylga bir nechta qurilmadan kirish imkonini beradi.

The 3-2-1 Backup Rule / 3-2-1 zaxiralash qoidasi

Following a simple backup rule reduces the risk of permanently losing important files: keep at least three copies of anything important, store them on at least two different types of media, and keep at least one copy in a separate physical location or in the cloud.

Oddiy zaxiralash qoidasiga amal qilish muhim fayllarni butunlay yo'qotish xavfini kamaytiradi: har qanday muhim narsaning kamida uchta nusxasini saqlang, ularni kamida ikki xil turdagi vositada joylashtiring va kamida bitta nusxasini alohida jismoniy joyda yoki bulutda saqlang.

B.5 Fundamental Printing Concepts / B.5 Chop etishning asosiy tushunchalari

Before sending a document to a printer, it is good practice to check how it will look once printed. The Print Preview feature shows exactly how each page will appear, including margins, page breaks, and any content that may be cut off at the edge of the page.

Hujjatni printerga yuborishdan oldin, uning chop etilgandan keyin qanday ko'rinishini tekshirish yaxshi amaliyot hisoblanadi. Print Preview (Chop etishni ko'rish) funksiyasi har bir sahifaning aniq qanday ko'rinishini, jumladan chegaralar, sahifa chegaralari va sahifa chetida kesilib qolishi mumkin bo'lgan har qanday kontentni ko'rsatadi.

B.5.1 Key Printing Settings / B.5.1 Asosiy chop etish sozlamalari

Key Print Settings / Asosiy chop etish sozlamalari

- Page range — printing all pages, the current page only, or a custom range (e.g., 1–3, 5)
- *Sahifalar diapazoni — barcha sahifalarni, faqat joriy sahifani yoki maxsus diapazonni (masalan, 1–3, 5) chop etish*
- Orientation — Portrait (vertical) for text-heavy pages, or Landscape (horizontal) for wide tables or charts
- *Yo'nalish — matnga boy sahifalar uchun Portrait (vertikal) yoki keng jadval/diagrammalar uchun Landscape (gorizontal)*
- Paper size — such as A4 or Letter, which must match the paper loaded in the printer
- *Qog'oz o'lchami — masalan, A4 yoki Letter, bu printerga solingan qog'ozga mos kelishi kerak*
- Color mode — full color or black-and-white (grayscale), which affects both appearance and ink usage
- *Rang rejimi — to'liq rangli yoki oq-qora (kulrang), bu ko'rinishga ham, siyoh sarfiga ham ta'sir qiladi*
- Number of copies
- *Nusxalar soni*

Choosing the correct settings before printing saves paper, ink, and time — for example, selecting grayscale for an internal draft, or printing only the needed page range from a long document rather than the entire file.

Chop etishdan oldin to'g'ri sozlamalarni tanlash qog'oz, siyoh va vaqtni tejaydi — masalan, ichki qoralama uchun kulrang rejimni tanlash yoki uzun hujjatning butun faylini emas, faqat kerakli sahifalar diapazonini chop etish.

Tip: Many printers and printer drivers also offer a duplex (double-sided) option and a 'print multiple pages per sheet' option, both of which reduce paper use for long documents.

Maslahat: *Ko'plab printerlar va printer drayverlarida duplex (ikki tomonlama) hamda 'bir varaqqa bir nechta sahifa chop etish' imkoniyati ham mavjud bo'lib, ikkalasi ham uzun hujjatlar uchun qog'oz sarfini kamaytiradi.*

B.6 Accessibility and Collaboration Features / B.6 Qulaylik va hamkorlik imkoniyatlari

Modern office programs include accessibility tools that make content usable for people with different needs: a screen reader can read text aloud for someone with low vision, closed captions can display spoken words as text in a presentation, and an alt text description can be attached to an image so a screen reader can describe it. Using built-in heading styles (rather than just making text bigger and bold) also allows accessibility tools to navigate a document by section.

Zamonaviy ofis dasturlarida turli ehtiyojlarga ega odamlar uchun kontentni qulay qiladigan qulaylik vositalari mavjud: ekran o'quvchisi ko'rish qobiliyati past bo'lgan odam uchun matnni ovoz chiqarib o'qib berishi mumkin, yopiq subtitrlar taqdimotdagi og'zaki so'zlarni matn sifatida ko'rsatishi mumkin, alt-matn tavsifi esa rasmga biriktirilib, ekran o'quvchisi uni tasvirlab berishi mumkin. Oddiygina matnni kattalashtirish va qalinlashtirish o'rniga o'rnatilgan sarlavha uslublaridan foydalanish ham qulaylik vositalariga hujjatni bo'limlar bo'yicha aylanish imkonini beradi.

Many programs also support real-time collaboration: several people can open and edit the same cloud-stored document at once, with each person's changes and cursor shown live, and a version history that allows anyone to see or restore an earlier draft if something is deleted by mistake.

Ko'plab dasturlar real vaqt rejimida hamkorlikni ham qo'llab-quvvatlaydi: bir nechta odam bulutda saqlangan bir xil hujjatni bir vaqtning o'zida ochib tahrirlashi mumkin, har bir odamning o'zgarishlari va kursori jonli ko'rsatiladi, versiyalar tarixi esa agar biror narsa xato bilan o'chirilsa, har kim oldingi qoralamani ko'rish yoki tiklash imkonini beradi.

B.8 Common Mistakes to Avoid / B.8 Ko'p uchraydigan xatolar

- Formatting text manually (spacing, bold) instead of using heading styles
- *Sarlavha uslublaridan foydalanish o'rniga matnni qo'lda formatlash (bo'shliq, qalinlashtirish)*
- Forgetting to credit an image or quote taken from another source
- *Boshqa manbadan olingan rasm yoki iqtibosga havola berishni unutish*
- Never saving a document until the very end of a long work session
- *Uzun ish sessiyasi oxirigacha hujjatni umuman saqlamaslik*
- Printing an entire long document when only one page was needed
- *Faqat bitta sahifa kerak bo'lganda butun uzun hujjatni chop etish*

Review Questions B / B qism bo'yicha savollar

1. What is a template, and why is it useful when starting a new document?

1. Shablon nima va yangi hujjat boshlashda nega foydali?

2. Name two differences between a word processing program and a presentation program.

2. Matn muharriri va taqdimot dasturi o'rtasidagi ikkita farqni ayting.

3. What symbol must every spreadsheet formula begin with?

3. Har qanday jadval formulasi qaysi belgi bilan boshlanishi kerak?

4. List three elements that should normally appear in a citation.

4. Iqtibosda odatda bo'lishi kerak bo'lgan uchta elementni sanab bering.

5. What is plagiarism, and why should it be avoided?

5. Plagiat nima va nega undan qochish kerak?

6. Explain the 3-2-1 backup rule in your own words.

6. 3-2-1 zaxiralash qoidasini o'z so'zlaringiz bilan tushuntiring.

7. Why might someone save a document as a PDF instead of leaving it in its original format?

7. Nega kimdir hujjatni asl formatida qoldirish o'rniga PDF sifatida saqlashi mumkin?

8. Name three settings you should check in Print Preview before printing.

8. Chop etishdan oldin Print Preview'da tekshirish kerak bo'lgan uchta sozlamani ayting.

B.7 Working Across Multiple Devices / B.7 Bir nechta qurilmada ishlash

It is common today to start a document on one device and continue it on another — for example, drafting on a laptop and reviewing on a tablet during a commute. Cloud-connected office programs handle this automatically, syncing changes as long as there is an internet connection. When working across different programs (for example, opening a .docx file in a different word processor), some advanced formatting may shift slightly, so it is good practice to check the layout after switching tools, especially before a final submission or printing.

Bugungi kunda hujjatni bir qurilmada boshlab, boshqasida davom ettirish odatiy holga aylangan — masalan, noutbukda qoralama yozib, yo'lda planshetda ko'rib chiqish. Bulutga ulangan ofis dasturlari internet ulanishi bo'lgan taqdirda o'zgarishlarni avtomatik sinxronlaydi. Turli dasturlar bilan ishlashda (masalan, .docx faylini boshqa matn muharririda ochishda) ba'zi murakkab formatlash biroz siljishi mumkin, shuning uchun vositani almashtirgandan so'ng, ayniqsa yakuniy topshirish yoki chop etishdan oldin, tartibni tekshirish yaxshi amaliyot hisoblanadi.

Part C — Living Online

C qism — Internetda yashash

Part Objectives / Qism maqsadlari

- C.1 Understand how the internet and web browsers work
- *C.1 Internet va veb-brauzerlar qanday ishlashini tushunish*
- C.2 Use email appropriately and effectively
- *C.2 Elektron pochtdan to'g'ri va samarali foydalanish*
- C.3 Recognize online safety risks and good digital citizenship
- *C.3 Onlayn xavfsizlik xavflari va yaxshi raqamli fuqarolikni anglash*
- C.4 Understand and manage a digital footprint
- *C.4 Raqamli izni tushunish va boshqarish*

C.1 Understanding the Internet and Browsers / C.1 Internet va brauzerlarni tushunish

The internet is a vast network connecting millions of devices worldwide, allowing them to exchange information. A web browser (such as Chrome, Safari, Firefox, or Edge) is the program used to access websites: it sends a request to a web server and displays the page that comes back. Every website has a unique address, called a URL, which typically starts with `https://` — the 's' indicating that the connection is encrypted and more secure.

Internet — bu dunyo bo'ylab millionlab qurilmalarni bog'lab, ular orasida ma'lumot almashishga imkon beruvchi ulkan tarmoq. Veb-brauzer (masalan, Chrome, Safari, Firefox yoki Edge) — veb-saytlarga kirish uchun ishlatiladigan dastur: u veb-serverga so'rov yuboradi va qaytib kelgan sahifani ko'rsatadi. Har bir veb-saytning URL deb ataladigan o'ziga xos manzili bor, u odatda `https://` bilan boshlanadi — bu yerdagi 's' harfi ulanish shifrlangani va xavfsizroq ekanini bildiradi.

How a Web Page Reaches You / Veb-sahifa sizga qanday yetib keladi

A search engine (such as Google or Bing) is a separate tool, built into or accessible from a browser, that helps find relevant websites by matching keywords typed by the user against an enormous index of web pages. Learning to phrase a search with specific, relevant keywords — rather than a full sentence — usually produces more useful results.

Qidiruv tizimi (masalan, Google yoki Bing) — bu brauzerga o'rnatilgan yoki undan foydalanish mumkin bo'lgan alohida vosita bo'lib, foydalanuvchi kiritgan kalit so'zlarni ulkan veb-sahifalar indeksi bilan solishtirib, tegishli veb-saytlarni topishga yordam beradi. To'liq jumla o'rniga aniq va tegishli kalit so'zlar bilan qidiruvni shakllantirishni o'rganish odatda foydaliroq natijalarga olib keladi.

C.2 Email Fundamentals and Etiquette / C.2 Elektron pochta asoslari va odob-axloqi

An email address has a standard structure: a username, the @ symbol, and a domain name, such as `name@example.com`. Beyond the message body, email includes a Subject line (a short summary of the topic), a To field (the main recipient), and optional Cc and Bcc fields for including other people either visibly (Cc) or invisibly to other recipients (Bcc).

Elektron pochta manzili standart tuzilishga ega: foydalanuvchi nomi, @ belgisi va domen nomi, masalan, `ism@example.com`. Xabar matnidani tashqari, elektron pochta Subject (mavzu qatori — mavzuning qisqa xulosasi), To (asosiy qabul qiluvchi) maydoni, hamda boshqa odamlarni ko'rinadigan holda (Cc) yoki boshqa qabul qiluvchilarga ko'rinmas holda (Bcc) qo'shish uchun ixtiyoriy Cc va Bcc maydonlari mavjud.

Anatomy of an Email / Elektron xatning tarkibi

To:	<i>Asosiy qabul qiluvchi</i>
Cc:	<i>Ko'chirma nusxa</i>
Subject:	<i>Mavzu</i>
Body text...	<i>Xat matni</i>

Good Practice	Yaxshi amaliyot
Use a clear, specific subject line	Aniq va tushunarli mavzu qatoridan foydalaning
Keep the message concise and organized	Xabarni qisqa va tartibli qiling
Use a polite greeting and closing	Odobli salomlashuv va yakunlash iborasidan foydalaning
Proofread before sending	Yuborishdan oldin matnni tekshirib chiqing
Avoid ALL CAPS, which can read as shouting	Baqirishdek qabul qilinishi mumkin bo'lgan katta harflardan (ALL CAPS) qoching

C.3 Online Safety and Digital Citizenship / C.3 Onlayn xavfsizlik va raqamli fuqarolik

Digital citizenship means using technology safely, responsibly, and respectfully. Key safety habits include using strong, unique passwords for different accounts, enabling two-factor authentication where available, being cautious about clicking links or attachments from unknown senders (a common phishing tactic), and never sharing sensitive personal information — such as a home address or financial details — with people or sites you do not fully trust.

Raqamli fuqarolik — texnologiyadan xavfsiz, mas'uliyatli va hurmat bilan foydalanishni anglatadi. Asosiy xavfsizlik odatlariga turli hisoblar uchun kuchli va noyob parollardan foydalanish, mavjud bo'lsa ikki bosqichli tasdiqlashni yoqish, noma'lum jo'natuvchilardan kelgan havola yoki qo'shimchalarni bosishda ehtiyot bo'lish (bu keng tarqalgan fishing usuli), hamda to'liq ishonmagan odam yoki saytlar bilan uy manzili yoki moliyaviy ma'lumotlar kabi nozik shaxsiy ma'lumotlarni hech qachon ulashmaslik kiradi.

What Makes a Strong Password / Kuchli parol qanday bo'ladi

Respectful online behavior — sometimes called netiquette — also matters: this includes being courteous in comments and messages, respecting others' privacy, and thinking carefully before posting, since content shared online can be copied, screenshotted, or seen by a much wider audience than originally intended.

Hurmatli onlayn xulq-atvor — ba'zan netiket deb ham ataladi — ham muhim: bunga izoh va xabarlarda muloyim bo'lish, boshqalarning shaxsiy hayotini hurmat qilish, hamda joylashtirishdan oldin diqqat bilan o'ylab ko'rish kiradi, chunki internetda ulashilgan kontent nusxalanishi, skrinshot qilinishi yoki dastlab mo'ljallangandan ancha kengroq auditoriya tomonidan ko'rilishi mumkin.

C.4 Managing Your Digital Footprint / C.4 Raqamli izingizni boshqarish

A digital footprint is the trail of data a person leaves behind while using the internet. It is useful to think of it in two parts: an active footprint, created intentionally (posts, comments, a public profile), and a passive footprint, collected without a direct, conscious action (browsing history, location data, cookies).

Raqamli iz — bu inson internetdan foydalanish jarayonida qoldiradigan ma'lumot izi. Uni ikki qismga bo'lib tasavvur qilish foydali: ataylab yaratiladigan faol iz (postlar, izohlar, ommaviy profil) va bevosita, ongli harakatsiz to'planadigan passiv iz (brauzer tarixi, joylashuv ma'lumotlari, cookie fayllari).

Your Digital Footprint / Raqamli izingiz

Managing a digital footprint responsibly includes periodically reviewing privacy settings on social media accounts, thinking about how a post might look to a future employer or a wider audience years later, and remembering that content is very difficult — often impossible — to fully remove once it has been shared publicly.

Raqamli izni mas'uliyat bilan boshqarish ijtimoiy tarmoq hisoblaridagi maxfiylik sozlamalarini vaqti-vaqti bilan qayta ko'rib chiqishni, postning yillar o'tib kelajakdagi ish beruvchi yoki kengroq auditoriyaga qanday ko'rinishi haqida o'ylashni, hamda kontent ommaviy ravishda ulashilgandan so'ng uni to'liq o'chirish juda qiyin — ko'pincha imkonsiz — ekanini eslab qolishni o'z ichiga oladi.

C.5 Cloud Tools and Digital Collaboration / C.5 Bulutli vositalar va raqamli hamkorlik

Cloud-based tools extend everyday work beyond a single device. A shared drive lets a group store and organize files in one place that everyone on a team can reach, a shared calendar lets people see each other's availability when scheduling a meeting, and a video-call platform lets people meet face to face without being in the same room. Learning to manage sharing permissions — deciding who can view, comment on, or edit a file — is an important part of using these tools responsibly.

Bulutga asoslangan vositalar kundalik ishni bitta qurilma doirasidan tashqariga chiqaradi. Umumiy disk guruh a'zolariga fayllarni jamoaning har bir kishisi kira oladigan bitta joyda saqlash va tashkil etish imkonini beradi, umumiy taqvim uchrashuv rejalashtirilganda odamlarga bir-birining bo'sh vaqtini ko'rish imkonini beradi, video qo'ng'iroq platformasi esa odamlarga bir xonada bo'lmasdan yuzma-yuz uchrashish imkonini beradi. Ulashish ruxsatlarini boshqarishni — kim faylni ko'rishi, izoh qoldirishi yoki tahrirlashi mumkinligini belgilashni — o'rganish bu vositalardan mas'uliyat bilan foydalanishning muhim qismidir.

C.6 Recognizing Misinformation Online / C.6 Onlayn dezinformatsiyani aniqlash

Not everything found online is accurate. Before trusting or sharing information, it helps to check the source (is it a known, reputable publisher, or an anonymous account?), look for the same claim confirmed by other independent sources, notice the publication date (old news is sometimes shared as if it were current), and be skeptical of content designed to provoke a strong emotional reaction, since that is a common tactic used to encourage sharing without careful reading.

Internetda topilgan hamma narsa aniq bo'lavermaydi. Ma'lumotga ishonish yoki uni ulashishdan oldin, manbani tekshirish (bu tanilgan, ishonchli nashriyotmi yoki anonim akkauntmi?), bir xil da'voni boshqa mustaqil manbalar ham tasdiqlaganini tekshirish, nashr sanasiga e'tibor berish (eski yangiliklar ba'zan go'yo dolzarbdek qilib ulashiladi), hamda kuchli hissiy reaksiyani qo'zg'atish uchun mo'ljallangan kontentga shubha bilan qarash foydali — chunki bu diqqat bilan o'qimasdan ulashishga undash uchun keng qo'llaniladigan usuldir.

C.7 Common Mistakes to Avoid / C.7 Ko'p uchraydigan xatolar

- Using the same password across many different accounts
- *Bir xil paroldan ko'plab turli hisoblar uchun foydalanish*
- Clicking a link in an email before checking the sender's real address
- *Jo'natuvchining haqiqiy manzilini tekshirmasdan xatdagi havolani bosish*
- Sharing a strong claim online without checking a second, independent source
- *Ikkinchi mustaqil manbani tekshirmasdan internetda kuchli da'voni ulashish*
- Assuming a public post is only seen by close friends
- *Ommaviy postni faqat yaqin do'stlar ko'radi deb o'ylash*

C.8 Digital Tools for Learning / C.8 O'qish uchun raqamli vositalar

Tool Type / Vosita turi	Typical Use / Odatiy foydalanish
Note-taking app	Dars qaydlarini tartiblaydi / Organizes class notes
Shared cloud drive	Guruh fayllarini bitta joyda saqlaydi / Keeps group files together

Tool Type / Vosita turi	Typical Use / Odatiy foydalanish
Video-call platform	Masofaviy dars yoki maslahatni ta'minlaydi / Enables remote sessions
Online calendar	Topshiriq va imtihon sanalarini kuzatadi / Tracks deadlines and exam dates

Review Questions C / C qism bo'yicha savollar

1. What does the 's' in https:// indicate?

1. https:// dagi 's' harfi nimani bildiradi?

2. What is the difference between Cc and Bcc in an email?

2. Elektron pochta Cc va Bcc o'rtasidagi farq nima?

3. Name two habits that help keep an online account secure.

3. Onlayn hisobni xavfsiz saqlashga yordam beradigan ikkita odatni ayting.

4. What is the difference between an active and a passive digital footprint?

4. Faol va passiv raqamli iz o'rtasidagi farq nima?

5. Why should you think carefully before posting something online?

5. Nega internetga biror narsa joylashtirishdan oldin diqqat bilan o'ylash kerak?

Part D — Practical Exercises and Quick Reference

D qism — Amaliy mashqlar va tezkor ma'lumotnoma

This part offers hands-on practice tasks and compact reference tables you can return to while working, so that the concepts from Parts A, B, and C become habits rather than just facts you remember for a test.

Ushbu qism amaliy mashq vazifalarini va ish jarayonida murojaat qilish mumkin bo'lgan qisqa ma'lumotnoma jadvallarini taklif etadi, shunda A, B va C qismlaridagi tushunchalar shunchaki imtihon uchun eslab qolingani faktlar emas, balki odatlarga aylanadi.

D.0 Applied Case Studies / D.0 Amaliy vaziyatlar tahlili

Case Study 1 — A Missing File / 1-vaziyat — Yo'qolgan fayl

Aziza spent three hours working on a report directly from an email attachment, without saving a separate copy. Her laptop restarted unexpectedly to install an update, and the attachment version reverted to blank. Because she had not saved the file into a proper folder or backed it up to the cloud, all three hours of work were lost. Question: which two habits from Part B and Part A would have prevented this?

Aziza hisobotni to'g'ridan-to'g'ri elektron pochta ilovasidan, alohida nusxa saqlamasdan uch soat davomida yozdi. Noutbuki yangilanishni o'rnatish uchun kutilmaganda qayta ishga tushdi va ilova versiyasi bo'sh holatga qaytdi. U faylni to'g'ri papkaga saqlamagani yoki bulutga xazina nusxa olmagani uchun uch soatlik ish butunlay yo'qoldi. Savol: A va B qismlaridan qaysi ikkita odat buni oldini olgan bo'lardi?

Case Study 2 — A Suspicious Email / 2-vaziyat — Shubhali xat

Bobur receives an email claiming to be from his bank, urgently asking him to click a link and confirm his password because of "unusual account activity." The sender's address looks almost correct but has one extra letter. Question: what should Bobur check before clicking anything, and what does this scenario illustrate from Part C?

Bobur o'ziga bankdan kelgan, "g'ayrioddiy hisob faoliyati" tufayli shoshilinch ravishda havoani bosib, parolini tasdiqlashni so'ragan xat oladi. Jo'natuvchi manzili deyarli to'g'ri ko'rinadi, lekin bitta qo'shimcha harfga ega. Savol: Bobur biror narsani bosishdan oldin nimani tekshirishi kerak va bu vaziyat C qismidan nimani ko'rsatadi?

Case Study 3 — Building a Class Presentation / 3-vaziyat — Sinf taqdimotini tayyorlash

A student team is preparing a ten-slide presentation and wants every slide to look consistent, with images properly credited to their original sources, and a final version they can print as a handout. Question: name one tool or concept from each of Part A, B, and C that this team should use.

Talabalar guruhi o'nta slayddan iborat taqdimot tayyorlamoqda va har bir slayd izchil ko'rinishga ega bo'lishini, rasmlar asl manbalariga to'g'ri havola qilinishini, hamda tarqatma sifatida chop etish mumkin bo'lgan yakuniy versiyani xohlaydi. Savol: bu guruh A, B va C qismlarining har biridan qaysi vosita yoki tushunchani qo'llashi kerak?

Case Study 4 — A Full Cloud Drive / 4-vaziyat — To'lgan bulutli disk

Dilnoza's cloud storage account is almost full, and she cannot tell which files are safe to delete because many have generic names like "Untitled" and "New Document." Question: what habit from Part A would have prevented this situation, and what should she do now before deleting anything?

Dilnozaning bulutli xotirasi deyarli to'lgan va u qaysi fayllarni o'chirish xavfsiz ekanini bilolmayapti, chunki ko'plarida "Untitled" va "New Document" kabi umumiy nomlar bor. Savol: A qismidagi qaysi odat bu vaziyatning oldini olgan bo'lardi va u biror narsani o'chirishdan oldin nima qilishi kerak?

Case Study 5 — Sharing a Group Project / 5-vaziyat — Guruh loyihasini ulashish

A group of four classmates each wrote a different section of a report in separate files, and now need to combine them, keep them updated together, and let their teacher view (but not edit) the final version. Question: which Part D quick-reference idea and which Part B concept would help them do this smoothly?

To'rtta sinfdoshdan iborat guruh hisobotning turli bo'limlarini alohida fayllarda yozdi va endi ularni birlashtirish, birgalikda yangilab borish, hamda o'qituvchisiga yakuniy versiyani ko'rish (lekin tahrirlamaslik) imkonini berishlari kerak. Savol: D qismidagi qaysi tezkor ma'lumotnoma g'oyasi va B qismidagi qaysi tushuncha ularga bu ishni silliq bajarishga yordam beradi?

D.0.1 Sample Citation in Three Styles / D.0.1 Uch uslubda namunaviy iqtibos

The same source can be cited differently depending on the required style. The example below shows one book cited in APA, MLA, and Chicago style, so the differences in punctuation and ordering are easy to compare.

Bir xil manba talab qilingan uslubga qarab turlicha keltirilishi mumkin. Quyidagi misolda bitta kitob APA, MLA va Chicago uslublarida keltirilgan, shunda tinish belgilari va tartibdagi farqlarni solishtirish oson.

Style / Uslub	Example / Misol
APA	Karimov, A. (2023). Digital Skills Today. TechPress.
MLA	Karimov, Aziz. Digital Skills Today. TechPress, 2023.
Chicago	Karimov, Aziz. Digital Skills Today. TechPress, 2023.

D.1 Practical Exercises / D.1 Amaliy mashqlar

Exercise 1 — Build a Simple Document / 1-mashq — Oddiy hujjat tuzish

Open a word processor and create a one-page flyer for a fictional community event. Include a title using a large, bold font, at least one bulleted list of event details (date, time, location), and one inserted image or shape. Save the file once as .docx and once as .pdf, and compare how each version looks when reopened.

Matn muharririni oching va xayoliy jamoat tadbiri uchun bir sahifali reklama varag'i yarating. Katta va qalin shriftidagi sarlavha, tadbir tafsilotlari (sana, vaqt, joy) bilan kamida bitta ro'yxat belgisi ro'yxat, hamda bitta kiritilgan rasm yoki shakl kiriting. Faylni bir marta .docx, bir marta esa .pdf sifatida saqlang va qayta ochilganda ikkalasining ko'rinishini solishtiring.

Exercise 2 — Practice Referencing / 2-mashq — Manba ko'rsatishni mashq qilish

Find two short articles online about any topic that interests you. Write a three-sentence summary of each in your own words, and add a properly formatted citation for each source beneath its summary, including author, title, and date where available.

Sizni qiziqtirgan har qanday mavzu bo'yicha internetdan ikkita qisqa maqola toping. Har birining uch jumla xulosasini o'z so'zlaringiz bilan yozing va har bir manba uchun mavjud bo'lsa muallif, sarlavha va sana bilan to'g'ri formatlangan iqtibosni xulosa ostiga qo'shing.

Exercise 3 — Build a Simple Spreadsheet Budget / 3-mashq — Oddiy jadval byudjetini tuzish

Create a spreadsheet listing five typical monthly expenses in one column and their amounts in the next. Use a SUM formula to calculate the total automatically, then add one simple bar chart showing each expense compared to the others.

Bir ustunda beshta odatiy oylik xarajatni, keyingi ustunda esa ularning summasini ko'rsatuvchi jadval yarating. Umumiy summani avtomatik hisoblash uchun SUM formulasidan foydalaning, so'ng har bir xarajatni boshqalari bilan solishtiruvchi oddiy ustunli diagramma qo'shing.

Exercise 4 — Online Safety Self-Check / 4-mashq — Onlayn xavfsizlik bo'yicha o'z-o'zini tekshirish

Review the privacy and security settings on one account you use often (email or social media). Check whether two-factor authentication is enabled, review who can see your posts or profile by default, and note one setting you decide to change as a result.

Tez-tez foydalanadigan bitta hisobingiz (elektron pochta yoki ijtimoiy tarmoq) maxfiylik va xavfsizlik sozlamalarini ko'rib chiqing. Ikki bosqichli tasdiqlash yoqilganligini tekshiring, standart bo'yicha kim postlaringiz yoki profilangizni ko'ra olishini ko'rib chiqing, va shu asosda o'zgartirishga qaror qilgan bitta sozlamani belgilang.

D.1.1 Sample Answers to the Exercises / D.1.1 Mashqlarga namunaviy javoblar

There is no single correct file for these exercises, but a strong attempt for Exercise 1 typically includes a title in at least 24-point bold text, three to five bullet points with the event's date, time, and location, and an image resized to fit neatly within the margins. For Exercise 3, a strong attempt uses an actual =SUM() formula rather than a manually typed total, so the chart and total update automatically if a number changes.

Bu mashqlar uchun yagona to'g'ri fayl yo'q, ammo 1-mashq uchun yaxshi urinish odatda kamida 24 nuqtali qalin matndagi sarlavhani, tadbirning sanasi, vaqti va joyi bilan uch-beshta ro'yxat belgisini, hamda chegaralarga toza sig'adigan qilib o'lchami o'zgartirilgan rasmni o'z ichiga oladi. 3-mashq uchun yaxshi urinish qo'lda kiritilgan jami o'rniga haqiqiy =SUM() formulasidan foydalanadi, shunda raqam o'zgarganda diagramma va jami avtomatik yangilanadi.

D.2 Quick Reference: Common Keyboard Shortcuts / D.2 Tezkor ma'lumotnoma: keng tarqalgan klaviatura yorliqlari

Shortcut	Action / Amal
Ctrl + C / Ctrl + V	Copy / Paste — Nusxa olish / Joylashtirish
Ctrl + X	Cut — Kesib olish
Ctrl + Z / Ctrl + Y	Undo / Redo — Bekor qilish / Qaytarish
Ctrl + S	Save — Saqlash
Ctrl + P	Print — Chop etish
Ctrl + A	Select All — Barchasini tanlash
Ctrl + B / Ctrl + I / Ctrl + U	Bold / Italic / Underline — Qalin / Kursiv / Tagiga chizilgan
Ctrl + F	Find — Qidirish
Alt + Tab	Switch between open windows — Ochiq oynalar orasida almashish

D.3 Quick Reference: Pre-Print Checklist / D.3 Tezkor ma'lumotnoma: chop etishdan oldingi tekshiruv ro'yxati

- Check Print Preview for layout, margins, and cut-off content
- *Tartib, chegaralar va kesilib qolgan kontent uchun Print Preview'ni tekshiring*
- Confirm the correct printer and paper size are selected
- *To'g'ri printer va qog'oz o'lchami tanlanganini tasdiqlang*
- Choose color or grayscale based on the document's purpose
- *Hujjat maqsadiga qarab rangli yoki kulrang rejimni tanlang*
- Set the correct page range and number of copies
- *To'g'ri sahifalar diapazoni va nusxalar sonini belgilang*

D.4 Extended Practice Quiz / D.4 Kengaytirilgan test savollari

For each question, choose the best answer. Answers appear in the Answer Key that follows.

Har bir savol uchun eng to'g'ri javobni tanlang. Javoblar keyingi Javoblar kaliti bo'limida berilgan.

1. Which device type generally offers the most power for a fixed location?

a) Smartphone b) Desktop c) Tablet

1. Qaysi qurilma turi odatda belgilangan joy uchun eng ko'p quvvat beradi?

a) Smartfon b) Statsionar c) Planshet

2. Which component is cleared when a device is powered off?

a) Storage b) RAM c) CPU

2. Qurilma o'chirilganda qaysi komponent tozalanadi?

a) Xotira b) RAM c) Protssessor

3. A pre-built layout with sample text and formatting is called a:

a) Template b) Folder c) Cell

3. Namuna matn va formatlash bilan tayyor tuzilma qanday ataladi:

a) Shablon b) Papka c) Yacheyka

4. Every spreadsheet formula must begin with which symbol?

a) # b) = c) @

4. Har qanday jadval formulasi qaysi belgi bilan boshlanishi kerak?

a) # b) = c) @

5. Presenting someone else's work as your own is called:

a) Referencing b) Plagiarism c) Attribution

5. Boshqa birovning ishini o'zinikidek taqdim etish qanday ataladi:

a) Manba ko'rsatish b) Plagiat c) Attribution

6. The 3-2-1 backup rule recommends how many total copies?

a) 1 b) 2 c) 3

6. 3-2-1 xaxiralash qoidasi jami nechta nusxani tavsiya qiladi?

a) 1 b) 2 c) 3

7. Which file format best preserves exact layout across devices?

a) .pdf b) .txt c) .jpg

7. Qaysi fayl formati barcha qurilmalarda aniq tuzilishni eng yaxshi saqlaydi?

a) .pdf b) .txt c) .jpg

8. Landscape orientation is usually better suited for:

a) A letter b) A wide table or chart c) A poem

8. Landscape yo'nalishi odatda nima uchun yaxshiroq mos keladi:

a) Xat b) Keng jadval yoki diagramma c) She'r

9. The 's' in https:// indicates that a connection is:

a) Faster b) Encrypted c) Free

9. https:// dagi 's' ulanish qanday ekanini bildiradi:

a) Tezroq b) Shifrlangan c) Bepul

10. Which email field hides a recipient from other recipients?

a) To b) Cc c) Bcc

10. Qaysi elektron pochta maydoni qabul qiluvchini boshqalardan yashiradi?

a) To b) Cc c) Bcc

11. Clicking a suspicious link in an unexpected email is a risk of:

a) Phishing b) Backup c) Formatting

11. Kutilmagan xatdagi shubhali havolani bosish qaysi xavfni tug'diradi:

a) Fishing b) Zaxira c) Formatlash

12. Data collected without a direct, conscious action (like browsing history) is part of your:

a) Active footprint b) Passive footprint c) Template

12. Bevosita ongli harakatsiz to'planadigan ma'lumot (masalan, brauzer tarixi) nimaning bir qismi:

a) Faol iz b) Passiv iz c) Shablon

13. Restarting a device is a common first step for solving:

a) A slow or frozen program b) A lost password c) A print job

13. Qurilmani qayta ishga tushirish odatda qaysi muammoni hal qilishning birinchi qadami:

a) Sekin yoki qotib qolgan dastur b) Yo'qolgan parol c) Chop etish vazifasi

14. Attaching a description to an image for a screen reader is called:

a) Alt text b) Cc c) Backup

14. Ekran o'quvchisi uchun rasmga tavsif biriktirish qanday ataladi:

a) Alt-matn b) Cc c) Zaxira

15. Reviewing an app's screen-time report supports:

a) Digital wellbeing b) File compression c) Printing

15. Ilovaning ekran vaqti hisobotini ko'rib chiqish nimani qo'llab-quvvatlaydi:

a) Raqamli farovonlik b) Faylni siqish c) Chop etish

16. A word processor's tools focus mainly on:

a) Paragraphs and page layout b) Rows and formulas c) Slide transitions

16. Matn muharririning vositalari asosan nimaga qaratilgan:

a) Abzats va sahifa tartibi b) Qator va formulalar c) Slayd o'tishlari

17. A design theme in a presentation program mainly controls:

a) File size b) Color palette and fonts across slides c) Internet speed

17. Taqdimot dasturidagi dizayn mavzusi asosan nimani boshqaradi:

a) Fayl hajmi b) Slaydlar bo'ylab rang palitrasi va shriftlar c) Internet tezligi

18. A shared cloud drive is most useful for:

a) Printing b) Keeping a group's files in one place c) Changing passwords

18. Umumiy bulutli disk nima uchun eng foydali:

a) Chop etish b) Guruh fayllarini bitta joyda saqlash c) Parollarni o'zgartirish

19. Before trusting a strong claim found online, it helps to:

a) Share it immediately b) Check an independent second source c) Ignore the date

19. Internetda topilgan kuchli da'voga ishonishdan oldin nima foydali:

a) Uni darhol ulashish b) Mustaqil ikkinchi manbani tekshirish c) Sanaga e'tibor bermaslik

D.3.1 Common File Extensions / D.3.1 Keng tarqalgan fayl kengaytmalari

Extension	Typical Content / Odatiy tarkib
.docx	Word processing document
.xlsx	Spreadsheet
.pptx	Presentation
.pdf	Fixed-layout shareable document
.jpg / .png	Image

Extension	Typical Content / Odatiy tarkib
.mp4	Video
.zip	Compressed archive of multiple files

Answer Key / Javoblar kaliti

The notes below summarize the core idea behind each review question rather than giving a single memorized sentence — use them to check your reasoning, not just your wording.

Quyidagi izohlar har bir savol ortidagi asosiy g'oyani umumlashtiradi, yodlangan bitta jumlani emas — ulardan faqat so'zlaringizni emas, mulohazangizni tekshirish uchun foydalaning.

Part A / A qism

1. Desktops offer power for a fixed location; laptops add portability; tablets/phones prioritize touch and mobility.

1. Statsionarlar joy uchun quvvat beradi; noutbuklar ko'chmalikni qo'shadi; planshet/telefonlar teginish va harakatchanlikka ustuvorlik beradi.

2. RAM is temporary working memory cleared on shutdown; storage holds files permanently.

2. RAM — o'chirilganda tozalanadigan vaqtinchalik xotira; xotira (storage) fayllarni doimiy saqlaydi.

3. The OS manages hardware and provides the environment for other programs to run.

3. OT apparatni boshqaradi va boshqa dasturlar ishlashi uchun muhit yaratadi.

4. Folders make files easier to find later and reduce the risk of loss or overwriting.

4. Papkalar fayllarni keyinroq topishni osonlashtiradi va yo'qotish yoki ustidan yozib yuborish xavfini kamaytiradi.

Part B / B qism

1. A template is a ready-made layout that saves setup time for standard documents.

1. Shablon — standart hujjatlar uchun sozlash vaqtini tejaydigan tayyor tuzilma.

2. Word processors focus on paragraphs and page layout; presentation tools focus on slides for a talk.

2. Matn muharrirlari abzats va sahifa tartibiga, taqdimot vositalari esa nutq uchun slaydlarga qaratilgan.

3. Every spreadsheet formula begins with an equals sign (=).

3. Har qanday jadval formulasi teng belgisi (=) bilan boshlanadi.

4. A citation typically needs the author, title, and date at minimum.

4. Iqtibos odatda kamida muallif, sarlavha va sanani talab qiladi.

5. Plagiarism is presenting someone else's work as your own; it is dishonest and often illegal.

5. Plagiat — boshqa birovning ishini o'zinikidek taqdim etish; bu nohalol va ko'pincha noqonuniy.

6. 3-2-1: three copies, on two storage types, with one stored off-site or in the cloud.

6. 3-2-1: uch nusxa, ikki xil vositada, bittasi tashqarida yoki bulutda saqlanadi.

7. A PDF preserves exact layout across devices, ideal for a final, uneditable version.

7. PDF barcha qurilmalarda aniq tuzilishni saqlaydi, yakuniy va tahrirlanmaydigan versiya uchun ideal.

8. Check page range, orientation, paper size, color mode, and copies before printing.

8. Chop etishdan oldin sahifalar diapazoni, yo'nalish, qog'oz o'lchami, rang rejimi va nusxalar sonini tekshiring.

Part C / C qism

1. The 's' means the connection is encrypted (secure).

1. 's' ulanish shifrlangan (xavfsiz) ekanini bildiradi.

2. Cc shows recipients to everyone; Bcc hides that recipient from others.

2. Cc qabul qiluvchini hammaga ko'rsatadi; Bcc esa uni boshqalardan yashiradi.

3. Strong unique passwords and two-factor authentication both improve account security.

3. Kuchli, noyob parollar va ikki bosqichli tasdiqlash hisob xavfsizligini oshiradi.

4. Active footprint is intentional (posts); passive footprint is collected automatically (browsing data).

4. Faol iz — ataylab (postlar); passiv iz — avtomatik to'planadi (brauzer ma'lumotlari).

5. Shared or public content can be copied and seen far beyond the intended audience, and is hard to fully remove.

5. Ulashilgan yoki ommaviy kontent mo'ljallangan auditoriyadan ancha kengroq ko'rilishi va nusxalanishi mumkin, uni to'liq o'chirish esa qiyin.

Part E — Guidance / E qism — Yo'nalish

Part E has no single correct wording; instead, check that your answer names a specific, relevant idea from the relevant part (for example, freeing storage space and restarting the device for question 1) rather than a vague general statement.

E qismda yagona to'g'ri so'z birikmasi yo'q; buning o'rniga, javobingiz noaniq umumiy bayonot emas, balki tegishli qismdan aniq va tegishli g'oyani (masalan, 1-savol uchun xotira joyini bo'shatish va qurilmani qayta ishga tushirish) nomlaganini tekshiring.

Extended Practice Quiz (D.4) Answers / Kengaytirilgan test (D.4) javoblari

1-b, 2-b, 3-a, 4-b, 5-b, 6-c, 7-a, 8-b, 9-b, 10-c, 11-a, 12-b, 13-a, 14-a, 15-a, 16-a, 17-a, 18-b, 19-b, 20-b

Index of Key Topics / Asosiy mavzular ko'rsatkichi

The topics below are grouped by part for quick browsing rather than listed with page numbers, since the book is designed to be searched digitally as often as read in print.

Quyidagi mavzular tezkor ko'rib chiqish uchun sahifa raqamlari bilan emas, balki qism bo'yicha guruhlangan, chunki kitob bosma nashr sifatida o'qilishi bilan bir qatorda tez-tez raqamli qidirilishi uchun ham mo'ljallangan.

- **Part A:** CPU, RAM, storage, operating systems, file management, troubleshooting, screen time, cloud storage
- **Part B:** Templates, formatting, spreadsheets, formulas, referencing, citation styles, backups, printing, accessibility
- **Part C:** Browsers, URLs, search engines, email, phishing, passwords, digital footprint, misinformation
- **Part D:** Exercises, case studies, keyboard shortcuts, checklists, extended quiz, final assessment

Frequently Asked Questions / Tez-tez so'raladigan savollar

Q: Do I need to memorize every keyboard shortcut in Part D?

A: No — start with Ctrl+C, Ctrl+V, Ctrl+Z, and Ctrl+S, since these four cover most daily work; the rest become natural with regular use.

S: D qismidagi har bir klaviatura yorlig'ini yodlashim kerakmi?

J: Yo'q — Ctrl+C, Ctrl+V, Ctrl+Z va Ctrl+S dan boshlang, chunki bu to'rttasi kundalik ishning aksariyatini qamrab oladi; qolganlari muntazam foydalanish bilan tabiiy ravishda o'rganiladi.

Q: Is it acceptable to use a citation generator instead of writing one by hand?

A: Yes, as a starting point — but it is still worth checking the generated citation against the required style guide, since generators sometimes miss a field or use an outdated format.

S: Qo'lda yozish o'rniga iqtibos generatoridan foydalanish mumkinmi?

J: Ha, boshlang'ich nuqta sifatida — lekin baribir yaratilgan iqtibosni talab qilinadigan uslub qo'llanmasi bilan solishtirib ko'rish foydali, chunki generatorlar ba'zan bir maydonni o'tkazib yuboradi yoki eskirgan formatdan foydalanadi.

Q: What if my device doesn't have all the settings described in Part A and B?

A: Exact menu names vary between software versions and brands, but the underlying concept — such as "a place to adjust display settings" — will exist somewhere; searching the setting's name inside the device's search bar usually finds it quickly.

S: Agar qurilmamda A va B qismlarida tasvirlangan barcha sozlamalar bo'lmasa-chi?

J: Aniq menyu nomlari dasturiy ta'minot versiyasi va brendiga qarab farq qiladi, lekin asosiy tushuncha — masalan, "display sozlamalarini o'zgartirish joyi" — qayerdadir mavjud bo'ladi; qurilmaning qidiruv panelida sozlama nomini qidirish odatda uni tezda topadi.

Glossary / Lug'at

Each entry below includes a short example sentence to show the term used in context.

Quyidagi har bir yozuv atamaning kontekstda qo'llanilishini ko'rsatish uchun qisqa misol jumlani o'z ichiga oladi.

Term / Atama	Ta'rif va misol / Definition & Example
Template	Shablon. <i>Ex: She used a resume template to save time.</i> <i>Misol: U vaqtini tejash uchun rezyume shablonidan foydalandi.</i>
Layout	Tartib. <i>Ex: Each slide used the same layout for consistency.</i> <i>Misol: Har bir slayd izchillik uchun bir xil tartibdan foydalandi.</i>
Attribution / Referencing	Manba ko'rsatish. <i>Ex: He added a reference for every image he used.</i> <i>Misol: U foydalangan har bir rasm uchun manba qo'shdi.</i>
Plagiarism	Plagiat. <i>Ex: Copying a paragraph without credit is plagiarism.</i> <i>Misol: Havolasiz abzatsni ko'chirish plagiat hisoblanadi.</i>
Citation	Iqtibos. <i>Ex: The citation included the author's name and the date.</i> <i>Misol: Iqtibosda muallifning ismi va sana ko'rsatilgan edi.</i>
Backup	Zaxira nusxa. <i>Ex: She kept a backup of her thesis on a cloud drive.</i> <i>Misol: U dissertatsiyasining zaxira nusxasini bulut diskda saqladi.</i>
Cloud storage	Bulutli xotira. <i>Ex: Cloud storage let him open the file from his phone.</i> <i>Misol: Bulutli xotira unga faylni telefonidan ochish imkonini berdi.</i>
File format	Fayl formati. <i>Ex: She changed the file format from .docx to .pdf.</i> <i>Misol: U fayl formatini .docx dan .pdf ga o'zgartirdi.</i>
Print Preview	Chop etishni ko'rish. <i>Ex: Print Preview showed a page was missing its margin.</i> <i>Misol: Print Preview bir sahifada chegara yo'qligini ko'rsatdi.</i>
Orientation	Yo'nalish. <i>Ex: He switched the orientation to Landscape for the wide table.</i> <i>Misol: U keng jadval uchun yo'nalishni Landscape'ga o'zgartirdi.</i>
CPU	Protssessor. <i>Ex: An older CPU can make a laptop feel slow.</i> <i>Misol: Eski protssessor noutbukni sekin his qildirishi mumkin.</i>
RAM	Operativ xotira. <i>Ex: More RAM let her run several programs at once.</i> <i>Misol: Ko'proq RAM unga bir nechta dasturni bir vaqtda ishlatish imkonini berdi.</i>

Term / Atama	Ta'rif va misol / Definition & Example
Operating system	Operatsion tizim. <i>Ex: The tablet's operating system updated overnight.</i> <i>Misol: Planshetning operatsion tizimi tunda yangilandi.</i>
Folder / Directory	Papka / Direktoriya. <i>Ex: He created a new folder for his school files.</i> <i>Misol: U maktab fayllari uchun yangi papka yaratdi.</i>
Cell (spreadsheet)	Yacheyka. <i>Ex: The total appeared in cell B10.</i> <i>Misol: Umumiy summa B10 yacheykasida paydo bo'ldi.</i>
Formula	Formula. <i>Ex: The formula =SUM(A1:A5) added five numbers.</i> <i>Misol: =SUM(A1:A5) formulasi beshta raqamni qo'shdi.</i>
URL	URL. <i>Ex: She typed the URL directly into the browser.</i> <i>Misol: U URL manzilni to'g'ridan-to'g'ri brauzerga kiritdi.</i>
Browser	Brauzer. <i>Ex: He opened three tabs in his browser.</i> <i>Misol: U brauzerida uchta tab ochdi.</i>
Search engine	Qidiruv tizimi. <i>Ex: The search engine returned thousands of results.</i> <i>Misol: Qidiruv tizimi minglab natijalarni qaytardi.</i>
Phishing	Fishing. <i>Ex: The email was a phishing attempt disguised as the bank.</i> <i>Misol: Xat bank niqobi ostidagi fishing urinishi edi.</i>
Two-factor authentication	Ikki bosqichli tasdiqlash. <i>Ex: Two-factor authentication asked for a code from his phone.</i> <i>Misol: Ikki bosqichli tasdiqlash uning telefonidan kodni so'radi.</i>
Digital footprint	Raqamli iz. <i>Ex: Every comment adds to her digital footprint.</i> <i>Misol: Har bir izoh uning raqamli iziga qo'shiladi.</i>
Netiquette	Netiket. <i>Ex: Good netiquette means not typing in all capital letters.</i> <i>Misol: Yaxshi netiket katta harflar bilan yozmaslikni anglatadi.</i>
Misinformation	Dezinformatsiya. <i>Ex: He checked two other sources before sharing the claim to avoid misinformation.</i> <i>Misol: U dezinformatsiyaning oldini olish uchun da'voni ulashishdan oldin ikkita boshqa manbani tekshirdi.</i>
Alt text	Alt-matn. <i>Ex: She added alt text so a screen reader could describe the photo.</i> <i>Misol: U ekran o'quvchisi fotoni tasvirlashi uchun alt-matn qo'shdi.</i>

Part E — Final Assessment

E qism — Yakuniy baholash

This final assessment combines all three parts of the book. Answer each question in your own words in a notebook or document before comparing your response with the guidance in the Answer Key. Aim to explain each answer in one or two complete sentences, not just a single word.

Ushbu yakuniy baholash kitobning barcha uchta qismini birlashtiradi. Javoblaringizni Javoblar kalitidagi yo'nalish bilan solishtirishdan oldin, har bir savolga daftar yoki hujjatda o'z so'zlaringiz bilan javob bering. Har bir javobni faqat bitta so'z bilan emas, bir yoki ikkita to'liq jumla bilan tushuntirishga harakat qiling.

1. A friend's laptop is running very slowly and its storage is almost full. Describe two steps that might help, using ideas from Part A.

1. Do'stingizning noutbuki juda sekin ishlayapti va uning xotirasi deyarli to'lgan. A qismidagi g'oyalardan foydalanib, yordam beradigan ikkita qadamni tasvirlab bering.

2. You are writing a report that includes a paragraph copied from a website. Explain what you must do before submitting the report, using ideas from Part B.

2. Siz veb-saytdan ko'chirilgan abzatsni o'z ichiga olgan hisobot yozyapsiz. B qismidagi g'oyalardan foydalanib, hisobotni topshirishdan oldin nima qilishingiz kerakligini tushuntiring.

3. You receive a message on social media from an unfamiliar account offering a prize if you click a link. Explain what risk this represents and what you should do, using ideas from Part C.

3. Ijtimoiy tarmoqda notanish akkaunt dan havolani bosish evaziga sovg'a taklif qiluvchi xabar olasiz. C qismidagi g'oyalardan foydalanib, bu qanday xavfni bildirishini va nima qilishingiz kerakligini tushuntiring.

4. Explain, in your own words, why saving a file and backing it up are two different (though related) habits.

4. Faylni saqlash va uning zaxira nusxasini olish nega ikkita turli (ammo bog'liq) odat ekanini o'z so'zlaringiz bilan tushuntiring.

5. Explain, using ideas from Part B, why this is not entirely true.

5. B qismidagi g'oyalardan foydalanib, bu nega to'liq to'g'ri emasligini tushuntiring.

6. A downloaded file will not open on a friend's computer. Suggest one likely cause from Part A and one from Part B.

6. Yuklab olingan fayl do'stingizning kompyuterida ochilmayapti. A qismidan bitta va B qismidan bitta ehtimoliy sababni taklif qiling.

7. Describe one way a strong password and a citation serve a similar underlying purpose, even though they look very different.

7. Kuchli parol va iqtibos tashqi ko'rinishi juda farq qilsa-da, qanday umumiy maqsadga xizmat qilishini tasvirlab bering.

8. Summarize, in two sentences, the single most useful habit you learned from this book and why.

8. Ushbu kitobdan o'rgangan eng foydali bitta odatingizni va nima uchun ekanini ikki jumlada xulosa qiling.

Closing Notes and Next Steps

Yakuniy so'z va keyingi qadamlar

Digital literacy is not a fixed destination but an ongoing practice: devices, applications, and online services continue to change, but the underlying habits in this book — organizing files thoughtfully, giving credit where it is due, protecting work with backups, checking settings before printing, and staying alert online — remain useful no matter which specific tool is in front of you.

Raqamli savodxonlik qat'iy manzil emas, balki davomiy amaliyotdir: qurilma, ilova va onlayn xizmatlar o'zgarib turadi, ammo ushbu kitobdagi asosiy odatlar — fayllarni oqilona tashkil etish, kerak bo'lganda havola berish, ishni xaxira nusxalar bilan himoya qilish, chop etishdan oldin sozlamalarni tekshirish va onlaynda hushyor bo'lish — qaysi aniq vosita qo'lingizda bo'lishidan qat'i nazar foydali bo'lib qoladi.

A good next step is to revisit Part D's exercises using your own real files and accounts rather than examples, since applying a skill to something that actually matters to you is what turns a review question into a lasting habit.

Yaxshi keyingi qadam — D qismidagi mashqlarni misollar o'rniga o'zingizning haqiqiy fayl va hisoblaringiz bilan qayta bajarishdir, chunki ko'nikmani sizga haqiqatan ham ahamiyatli bo'lgan narsaga qo'llash — bu takrorlash savolini doimiy odatga aylantiradigan narsadir.

Certificate of Completion

Tugatganlik sertifikati

This certifies that

Ushbu hujjat tasdiqlaydiki

has completed Parts A, B, C, and D of

Digital Literacy: Foundations

A, B, C va D qismlarini muvaffaqiyatli yakunladi
