IC3 GS6 Level 1 Project Workbook

First Edition

LearnKey provides on-demand training courses and online learning solutions to education, government, business, and individuals worldwide. LearnKey provides expert instruction for popular computer software, technical certifications, and application development with dynamic video-based courseware and effective learning management systems. LearnKey delivers content on the Web, by enterprise network, and on interactive CD-ROM. For a complete list of courses, visit:

IC3 GS6 Level 1

Introduction

Presented By
 **LearnKey®**

Best Practices Using LearnKey's Online Training

LearnKey offers video-based training solutions that are flexible enough to accommodate private students and educational facilities and organizations.

Our course content is presented by top experts in their respective fields and provides clear and comprehensive information. The full line of LearnKey products has been extensively reviewed to meet superior standards of quality. The content in our courses has also been endorsed by organizations such as Certiport, CompTIA®, Cisco, and Microsoft. However, it is the testimonials given by countless satisfied customers that truly set us apart as leaders in the information training world.

LearnKey experts are highly qualified professionals who offer years of job and project experience in their subjects. Each expert has been certified at the highest level available for their field of expertise. This expertise provides the student with the knowledge necessary to obtain top-level certifications in their chosen field.

Our accomplished instructors have a rich understanding of the content they present. Effective teaching encompasses not only presenting the basic principles of a subject but also understanding and appreciating organization, real-world application, and links to other related disciplines. Each instructor represents the collective wisdom of their field and within our industry.

Our Instructional Technology

Each course is independently created based on the manufacturer's standard objectives for which the course was developed.

We ensure that the subject matter is up-to-date and relevant. We examine the needs of each student and create training that is both interesting and effective. LearnKey training provides auditory, visual, and kinesthetic learning materials to fit diverse learning styles.

Course Training Model

The course training model allows students to proceed through basic training, building upon primary knowledge and concepts to more advanced applications and implementation. In this method, students will use the following toolset:

Pre-assessment: The pre-assessment is used to determine the student's prior knowledge of the subject matter. It will also identify a student's strengths and weaknesses, allowing the student to focus on the specific subject matter they need to improve the most. Students should not necessarily expect a passing score on the pre-assessment as it is a test of prior knowledge.

Video training sessions: Each training course is divided into sessions or domains and lessons with topics and subtopics. LearnKey recommends incorporating all available external resources into your training, such as student workbooks, glossaries, course support files, and additional customized instructional material. These resources are located in the folder icon at the top of the page.

Exercise labs: Labs are interactive activities that simulate situations presented in the training videos. Step-by-step instructions and live demonstrations are provided.

Post-assessment: The post-assessment is used to determine the student's knowledge gained from interacting with the training. In taking the post-assessment, students should not consult the training or any other materials. A passing score is 80 percent or higher. If the individual does not pass the post-assessment the first time, LearnKey recommends incorporating external resources, such as the workbook and additional customized instructional material.

Workbook: The workbook has various activities, such as fill-in-the-blank worksheets, short answer questions, practice exam questions, and group and individual projects that allow the student to study and apply concepts presented in the training videos.

Using This Workbook as a Student

This project workbook contains practice projects and exercises to reinforce the knowledge you have gained through the video portion of the IC3 GS6 Level 1 course. The purpose of this workbook is twofold. First, get you further prepared to pass the IC3 Digital Literacy Level 1 exam, and second, to get you job-ready skills and increase your employability in digital literacy.

This project workbook is versatile because the projects follow the order of the video portion of this course. You can complete the workbook exercises as you go through each section of the course, complete several of these at the end of each session, or complete them after viewing the entire course. The key is to go through these projects to strengthen and solidify your knowledge of this course.

Each project is mapped to a specific video (or videos) in the course and specific test objectives. The materials you will need for this course include:

- LearnKey's IC3 GS6 Level 1 courseware.
- The practice files for these projects, which are available at the following URL:
https://media-onlineexpert.akamaized.net/files/IC3_GS6_Digital_Literacy_Level_1.zip.

Benefits

- Learn basic digital literacy skills.
- View your online courseware anytime and anywhere.
- Put your skills to the test with dozens of pre and post-assessment questions and practice labs.

Skills Assessment

Instructions: Rate your skills on the following tasks from 1-5 (1 being needs improvement, 5 being excellent).

Skills	1	2	3	4	5
Access and navigate between digital environments.	☐	☐	☐	☐	☐
Identify digital devices and connections.	☐	☐	☐	☐	☐
Explain fundamental software concepts.	☐	☐	☐	☐	☐
Explain fundamental hardware concepts.	☐	☐	☐	☐	☐
Explain fundamental operating system concepts.	☐	☐	☐	☐	☐
Explain fundamental networking concepts.	☐	☐	☐	☐	☐
Create and manage a digital identity.	☐	☐	☐	☐	☐
Cultivate, manage, and protect your digital reputation.	☐	☐	☐	☐	☐
Respond to inappropriate digital behavior and content.	☐	☐	☐	☐	☐
Use and refine criteria for online searches.	☐	☐	☐	☐	☐
Understand methods for searching within digital content.	☐	☐	☐	☐	☐
Understand copyright and licensing restrictions for digital content.	☐	☐	☐	☐	☐
Save and back up work.	☐	☐	☐	☐	☐
Understand fundamental printing concepts.	☐	☐	☐	☐	☐
Express yourself through digital means.	☐	☐	☐	☐	☐
Interact with others in a digital environment.	☐	☐	☐	☐	☐
Identify digital collaboration concepts.	☐	☐	☐	☐	☐
Identify digital etiquette standards for collaborative processes.	☐	☐	☐	☐	☐
Describe digital security threats.	☐	☐	☐	☐	☐
Protect devices and digital content.	☐	☐	☐	☐	☐

Skills	1	2	3	4	5
Be aware of data-collection technology.	☐	☐	☐	☐	☐
Identify health risks associated with the use of digital technologies.	☐	☐	☐	☐	☐
	☐	☐	☐	☐	☐
	☐	☐	☐	☐	☐
	☐	☐	☐	☐	☐
	☐	☐	☐	☐	☐
	☐	☐	☐	☐	☐

Domain 1 Lesson 1

Presented By
 **LearnKey®**

Fill-in-the-Blanks

Instructions: While watching Domain 1 Lesson 1, fill in the missing words according to the information presented by the instructor. [References are found in the brackets.]

1. An _____ is the software that manages all of the installed applications and hardware on a computer or device. [Operating System Terms and Concepts]
2. The Start button is always found on the down left side of the taskbar on a Windows operating system. [Operating System Terms and Concepts]
3. The file explorer window is used to access all of the files and folders on the computer. [Operating System Terms and Concepts]
4. Selecting the star icon at the end of the address bar of a web browser bookmarks the URL. [Basic Functions of Web Browsers]
5. A url is a webpage's address. [Basic Functions of Web Browsers]
6. To access the internet, users must have either a _____ or _____ connection to the internet. [Accessing Digital Environments]
7. Users must have an email and be logged in to access their files in a digital environment. [Accessing Digital Environments]
8. Holding the alt key on the keyboard while selecting the tab key on the keyboard allows users to move between open Windows on the computer. [Navigating Between Digital Environments]

Operating Systems

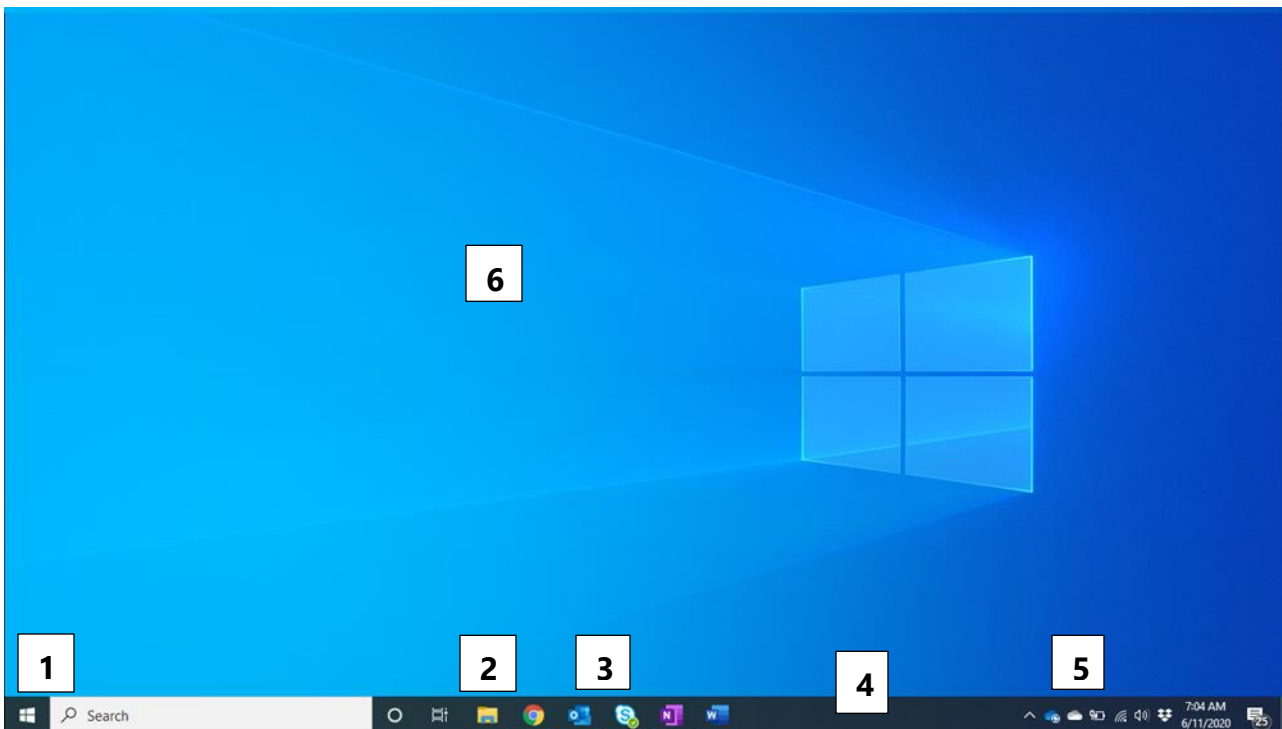

Operating systems vary between manufacturers, but they all have one thing in common: to manage the installed applications and hardware on a computer or device. Common computer operating systems include Windows, Macintosh, and Linux. The two most common operating systems for mobile devices are iOS and Android.

Purpose

Upon completing this project, you will be able to identify features on a Windows operating system interface.

Steps for Completion

1. Match the following terms with the correct location number on the Windows operating system interface, pictured below.
 - a. Toolbar 4
 - b. Pinned applications 3
 - c. Notification Area 5
 - d. File Explorer icon 2
 - e. Start button 1
 - f. Background 6

Domain 1

Topic: Access and Navigate Between Digital Environments

Subtopic: Operating System Terms and Concepts

Objectives covered

1 Technology Basics

1.1 Access and navigate between digital environments

1.1.1 Recognize operating system terms and concepts

Functions of a Web Browser

There are a variety of web browsers to choose from to work with online. All browsers process HTML to display website content. Each web browser has its differences, but they all include similar features like the address bar, the star at the end of the address bar, and control functions like the back and forward arrows.

Purpose

Upon completing this project, you will be familiar with the common functions of a web browser.

Steps for Completion

1. List three popular web browsers.
 - a. Google Chrome
 - b. Mozilla Firefox
 - c. Microsoft Edge
2. HTML stands for Hyper Text Markup Language.
3. A url is an address for a webpage.
4. To access a website, where should the web address be entered?
browser address bar
5. Selecting the back arrow will take a user to previous page.
6. What happens if a back or forward arrow is selected and held?
showing the history
7. The star at the end of the address bar is used to bookmark a URL.

Domain 1

Topic: Access and Navigate Between Digital Environments

Subtopic: Basic Functions of Web Browsers

Objectives covered

1 Technology Basics

1.1 Access and navigate between digital environments

1.1.2 Explain basic functions of web browsers

Digital Environment Requirements

Users must have an internet service provided to access the internet. Users will enter the password they created through the provider to access the internet. Once users have connected to the internet, they can navigate digital environments on the World Wide Web. Some environments require users to create an account and credentials to access the environment. Others are freely accessed.

Purpose

Upon completing this project, you will know what is required to access the internet and digital environments.

Steps for Completion

1. Access the computer's wired or wireless connection to the internet through the computer's settings.
 2. Take a screenshot showing your computer's wired or wireless connection to the internet.
 3. Paste the screenshot into a Word document.
 4. Save the project as **113-Completed**
 5. Explain what is required to access a digital environment that stores personal information like cloud storage.

Topic: Access and Navigate Between Digital Environments

Subtopic: Accessing Digital Environments

Objectives covered

1 Technology Basics

1.1 Access and navigate between digital environments

1.1.3 Explain processes and requirements for accessing digital environments

Navigating Between Environments

Users can switch between digital environments and applications without losing any information in either. Users do this by selecting the website tab or application they want to open with their mouse or using their keyboard to tab through the open windows on their computer.

Purpose

Upon completing this project, you will know how to navigate between digital environments.

Steps for Completion

1. Open a web browser.
2. Navigate to **learnkey.com**
3. Open a new tab.
4. Type **gmetrix.com** into the address bar to open the GMetrix website.
5. Open an additional tab.
6. Navigate to your school email account.
7. Navigate between digital environments with your mouse.
8. Navigate between digital environments with your keyboard.
9. Take a screenshot while navigating the digital environment with your keyboard, showing each website you have pulled up.
10. Save the project as **114-Completed**

1.1 Access and Navigate Between Digital Environments

1.1.4 Explain methods of navigating between digital environments

IC3 GS6 Level 1

Domain 1 Lesson 2

Fill-in-the-Blanks

Instructions: While watching Domain 1 Lesson 2, fill in the missing words according to the information presented by the instructor. [References are found in the brackets.]

1. An input device sends data to a computer. [Identify Input and Output Devices]
2. An output device receives data from a computer. [Identify Input and Output Devices]
3. A lightning is used to connect Apple devices to computers. [Cables, Connectors, and Connections]
4. A USB 1.0's port color is usually blue. [Cables, Connectors, and Connections]
5. bluetooth?? is used to connect devices wirelessly using radio waves. [Cables, Connectors, and Connections]
6. Software manages the computer's operating system by instructing it to complete specific tasks. [Basic Software Application Concepts]
7. Open source software can be modified and then used as theirs need. [Proprietary and Open Source Software]
8. The owners of ^{open source} software maintain exclusive control over their software. [Proprietary and Open Source Software]
9. ^{proprietary} software has proved to be more secure and has fewer malware attacks. [Proprietary and Open Source Software]
10. Apps and subscriptions are added though the microsoft Store on a Windows computer and the apple Store on a Mac computer. [Installing Software from Online Sources]

Input and Output Devices

Users plug devices into their computer or mobile device ports to input or output data. Input devices send data to the computer or mobile device, whereas output devices receive data from the computer or mobile device.

Purpose

Upon completing this project, you will be able to identify input and output devices.

Steps for Completion

1. A keyboard is an input device.
2. A printer is an output device.
3. Speakers are output devices.
4. A mouse is an input device.
5. A monitor is an input device.
6. output devices receive data from the computer.
7. input devices send data to the computer.

Objectives covered

1 Technology Basics

1.2 Identify digital devices and connections

1.2.1 Identify input devices

1.2.2 Identify output devices

Connectors

USB stands for Universal Serial Bus. USBs connect many different devices to a computer. USB connectors have a variety of standards and help devices transfer data, charge, or serve as input or output devices.

Purpose

Upon completing this project, you will be able to identify USB ports, their transfer rates, and connectors.

Steps for Completion

- Match each USB with its correct port color.

Blue	Black	White
------	-------	-------

- USB 1.0 blue
 - USB 2.0 black
 - USB 3.0 white
- Fill in each USB's transfer rates below.
 - USB 1.0 12 megabytes
 - USB 2.0 480 megabytes
 - USB 3.0 5 gigabytes
 - USB-C 480 megabytes
 - USB micro 480 megabytes
 - Smaller devices use a usb micro USB to transfer data to a desktop computer.
 - Which USB connector is reversible? usb-c
 - Which connector is used to connect an Apple device to a computer? lightning

Software Applications

Software works with hardware to make a computer or device function. Each operating system has software applications that come installed with a computer. Other software is available for download and installation to aid in the computer's functionality.

Purpose

Upon completing this project, you will understand the purpose of software and recognize software applications.

Steps for Completion

1. Software runs on top of _____.

2. Explain the software's job on the computer.

3. List three examples of software applications below.

a. _____

b. _____

c. _____

1.3 Explain fundamental software concepts

1.3.1 Explain basic software application concepts

Proprietary and Open Source Software

Depending on one's needs, one must choose either open source or proprietary software for their computer. There is a lot of freedom in using open source software since any one person or company does not own it. Proprietary software is a little more limited as owners maintain exclusive control. Both open source and proprietary software come with their own pros and cons. It is the user's responsibility to look at the pros and cons and determine which software is best suited for their needs.

Purpose

Upon completing this project, you will be able to identify proprietary and open source software.

Steps for Completion

1. For each feature below, decide whether it describes proprietary or open source software. Write your answer in the spaces provided.
 - a. Low-cost ownership: _____
 - b. License is technology-neutral: _____
 - c. Prone to malware attacks: _____
 - d. Users can modify the software: _____
 - e. Known for being user-friendly: _____
2. If you were starting your own business, would you choose open source software or proprietary software? Provide 2 or 3 reasons for your decision.

Installing Software Online

Users can download and install software via the internet through a website. Downloading on the internet opens users up to potential viruses. Use caution when downloading and installing software online. Only download software from trusted sites. Once a user determines that a site is safe, they can proceed with the software's download and installation by following the website's steps.

Software is also downloaded through the Microsoft Store on a Windows computer and the App Store on a Mac computer.

Purpose

Upon completing this project, you will be familiar with how to install software from the internet.

Steps for Completion

1. Open either the Microsoft Store or the App Store on your computer.
2. Search for the Spotify application.
3. Take a screenshot showing the Spotify application.
4. Save the screenshot as **133-Completed**
5. Select the _____ button to install the application.
6. Before installing software online, it first needs to be _____.
7. List two locations where a downloaded file from the internet can be found.

IC3 GS6 Level 1

Domain 1 Lesson 3

Fill-in-the-Blanks

Instructions: While watching Domain 1 Lesson 3, fill in the missing words according to the information presented by the instructor. [References are found in the brackets.]

1. Apps are installed via the _____ Store on a Windows computer and the _____ Store on a Mac computer. [Concepts Related to Computing Devices]
2. ROM uses _____ memory to store data. [Concepts Related to Memory]
3. _____ requires a power source to store data. [Concepts Related to Memory]
4. A computer's operating system is usually stored on the _____. [Concepts Related to Data Storage]
5. A hard drive uses _____ memory to store data. [Concepts Related to Data Storage]
6. iOS is a(n) _____ operating system. [Mobile Device Operating Systems]
7. Android is a(n) _____ operating system. [Mobile Device Operating Systems]
8. A _____ responds to simple voice commands like setting and alarm requests. [Mobile Device Operating Systems]
9. The Linux operating system is a(n) _____ operating system. [Mobile Device Operating Systems]
10. The Windows operating system is a(n) _____ operating system. [Mobile Device Operating Systems]
11. A _____ provides the means to connect to the internet through a phone line. [Network Connectivity Concept]
12. A _____ transmits data packets from one computer network to another computer network. [Network Connectivity Concept]
13. A _____ is an application used to access websites on the internet. [Online Connectivity Concepts]
14. A _____ is used to measure how much traffic a website is getting. [Online Connectivity Concepts]
15. The _____ is an open network, and anyone can access it. [Network and Connection Types]
16. The use of the _____ is limited as logins are required. [Network and Connection Types]
17. Wi-Fi uses _____ to establish a connection to a network. [Network and Connection Types]
18. The _____ and internet _____ provide the communication path and connection to the network. [Networking Infrastructure]
19. Network infrastructure is made up of _____, _____, and an internet service provider. [Networking Infrastructure]
20. Mobile device connectivity is displayed at the _____ of the screen. [Identify Whether a Device is Connected]
21. To check a Windows computer's network status, users should open the _____ menu, open Settings, select _____, and then select Status. [Identify Whether a Device is Connected]
22. To run a Network Diagnostics on a Windows computer, select the _____ option on the Status page. [Basic Network Troubleshooting Techniques]

Computing Devices

Computing devices come in a range of sizes and designs. All computing devices have a few things in common. They all have a central processing unit and an operating system and use RAM and ROM to function.

Purpose

Upon completing this project, you will be familiar with computing devices and their components.

Steps for Completion

1. A _____ computer is made up of a separate tower and monitor.
2. _____ have the tower, monitor, keyboard, speakers, and touchpad mouse built into one unit.
3. An all-in-one computer has the _____ built into the back of the monitor.
4. What does CPU stand for? _____
5. Tablets and smartphones have a _____ instead of a keyboard and mouse.
6. Which computing devices can run off battery sources to function?
 - a. _____
 - b. _____
 - c. _____

Hard Drive Storage

A hard drive is the hardware that stores the digital data for the computer. A user's files, software applications, operating system, music, and pictures are all stored on the hard drive.

Purpose

Upon completing this project, you will be familiar with data storage options.

Steps for Completion

1. A hard drive uses _____ memory to store data.
2. When a computer's hard drive gets too full, the computer's _____ tends to slow down.
3. Some computers use a _____ drive as the main storage for the computer's operating system, instead of a magnetic hard drive.
4. List two places a user can store personal data instead of a hard drive.

Topic: Fundamental Operating System Concepts

Subtopic: Mobile Device Operating Systems

Objectives covered

1 Technology Basics

1.5 Explain fundamental operating system concepts

1.5.1 Compare and contrast features of mobile device operating systems

Computer Operating Systems

Users determine which computer operating system best suits their needs by looking at what each operating system offers. Open source operating systems provide users with the ability to modify and distribute the software. The owner maintains full control of proprietary software. Users cannot modify and distribute the software.

Purpose

Upon completing this project, you will be familiar with the Linux, Windows, and macOS operating systems and know whether they are proprietary or open source.

Steps for Completion

1. Determine whether each operating system is proprietary or open source.
 - a. Linux _____
 - b. Windows _____
 - c. macOS _____
2. The _____ operating system can run on any hardware.
3. The _____ operating system is designed to be used on a Macintosh computer.
4. List two operating systems that are known for being user-friendly.
 - a. _____
 - b. _____
5. Which operating system is very inexpensive or sometimes free to use? _____
6. _____ is a cross-platform operating system.

Connecting to a Network

There are three different types of networks: cellular, wireless, and wired. Users will need components to connect to the network. Some components include an Ethernet cable, modem, and network adapter. A DSL or cable connection is also necessary to connect to the internet through a telephone line or a cable television network.

Purpose

Upon completing this project, you will be familiar with the components required to connect to a network.

Steps for Completion

1. An _____ cable is used to connect wired networks.
2. A modem demodulates the data from _____ to _____ mode so it can be sent over a network.
3. A router transmits _____ from one computer network to another.
4. A _____ is the hardware within the computer used to connect the computer to another computer or server over a Local Area Network.
5. DSL stands for _____.
6. DSL allows users to connect a computer or a router to a(n) _____.
7. Explain the difference between cable internet bandwidth and DSL bandwidth.

1.6 Explain fundamental networking concepts

1.6.1 Describe network connectivity concepts

Online Connectivity

To connect to the internet, open a web browser. Users can navigate websites using the address bar from a web browser. Once a user connects to a website, a session begins. The website administrator determines the session's length. Most sessions are typically 30 minutes long.

Purpose

Upon completing this project, you will know how to connect to the internet and websites. You will also be familiar with what a session is and its purpose.

Steps for Completion

1. A _____ is a set of computers or devices that are connected to share data.
2. To open a web browser on a desktop, _____ the browser icon.
3. Explain how to connect to a website using a web browser.

4. Explain what a session is.

5. Explain the purpose of a session.

Networks and Connections

To access a network, users must have a wired or wireless connection. Wired connections connect a computer or device to a network using a physical cable. A wireless connection connects a computer or a device to a network using radio waves and doesn't require a cable. Devices can connect to two types of networks: internet and intranet.

Purpose

Upon completing this project, you will be familiar with the internet and intranet network options and the ways to connect to those networks.

Steps for Completion

1. The internet is a(n) _____ network.
2. The intranet is a(n) _____ network.
3. The _____ is used to transmit data within a company or institution.
4. List a pro and a con associated with using a wireless connection.

Pro: _____

Con: _____

5. List a pro and a con associated with using a wired connection to connect to a network.

Pro: _____

Con: _____

6. The _____ most commonly requires a wired connection to access the network.
7. The intranet is highly secure, and users must _____ to access it.

Network Infrastructure

Network infrastructure is the hardware and software connected and working together to create network connectivity, communication, operations, and management. Hardware and internet connectivity create a communication path and connectivity. When the hardware is run with the appropriate software, this creates the operation and management of the network.

Purpose

Upon completing this project, you will know the components that make up a network infrastructure.

Steps for Completion

1. _____ uses a circuit-switched telephone network to connect to the internet.
2. A _____ is also known as the network interface card (NIC).
3. List three pieces of hardware that are required to connect to a network.
 - a. _____
 - b. _____
 - c. _____
4. An _____ and a _____ are required to connect to the internet.
5. _____ and _____ software are used to guard your computer against virus attacks.
6. When hardware and software are connected and working together, they make up the network _____.

Network Connection Status

Network connection status lets users know if their computer or device is connected to a network.

Users check the network connection on a PC through the Network and Internet settings. To check the network connection on a Mac computer, open the System Preferences and select Network.

Cell phone and tablet users have an internet access icon at the top of the device's screen. This icon displays the connection status.

Purpose

Upon completing this project, you will know how to check the network status on a computer and mobile device.

Steps for Completion

1. PC users: navigate to the computer's network status using the Start menu. Take a screenshot of the status.
 - a. Mac users: navigate to the computer's network status using the Apple menu. Take a screenshot of the status.
2. Save the screenshot as **165-Completed** in the Student Folder.
3. The connectivity status is checked from the _____ on a computer.
4. Connectivity for cell phones and tablets is displayed at the _____ of the screen.
5. If a mobile device is not connected to the internet, a circle with a line through it or an _____ is displayed next to the internet access icon.

Domain 2 Lesson 1

Fill-in-the-Blanks

Instructions: While watching Domain 2 Lesson 1, fill in the missing words according to the information presented by the instructor. [References are found in the brackets.]

1. Bank reports and social media posts are both examples of _____ data. [Manage Personal Data Online]
2. Passwords should include a mixture of _____ letters, numbers, and _____ characters. [Manage Personal Data Online]
3. Look for _____ at the beginning of the address bar before entering sensitive information on a webpage. [Manage Personally Identifiable Information]
4. When sending personally identifiable information in an email, _____ the message. [Manage Personally Identifiable Information]
5. A _____ allows users to create a secure connection to the internet using a separate network connection. [Maintain Digital Privacy and Security]
6. _____ does not track or leave any traces of what was browsed. [Maintain Digital Privacy and Security]

Personal Data Online

Personal data is information belonging to an individual. This information includes photos, documents, banking reports, or recorded details of an individual.

A popular option for managing personal data online is through cloud storage. Cloud storage allows users to create an account with a password to upload, store, and organize files and other data online.

Personal data is also stored on social media sites, email accounts, and other personal accounts created online. It is important for users to create strong passwords to keep their data secure.

Purpose

Upon completing this project, you will be familiar with what personal is, where it can be stored online, and how to create passwords to keep it safe.

Steps for Completion

1. List two examples of personal data.
 - a. _____
 - b. _____
2. Cloud storage uses cloud _____ to store data.
3. Cloud storage has strong _____ and _____ set in place to protect your data from attack.
4. A strong password should be at least _____ characters long.
5. Explain why the length of a password is important.

6. Passwords should be a mixture of _____ and _____ letters, numbers, and _____.
7. Which of the passwords listed below is the strongest password choice? _____
 - a. Lat3rZ3?
 - b. Spencer95
 - c. Dec271983
 - d. jammer23!

Keep Personally Identifiable Information Safe

Personally identifiable information includes anything that could distinguish or track a person's identity, including a Social Security number, mailing address, banking information, and images. Individuals should take precautions to protect this information.

Purpose

Upon completing this project, you will know how to safeguard personally indefinable information online.

Steps for Completion

1. Which IP address is secure to use? _____
 - a. <http://www.catsanddogs.com>
 - b. <https://www.catsanddogs.com>
2. If confidential information such as banking information or a Social Security number is being used online, users should access the site _____ and not through a _____.
3. List two forms of personal information that will need to be provided when purchasing something online?
 - a. _____
 - b. _____
4. When sending personally identifiable information through email, _____ the message.

Digital Privacy and Security

There are many things users can and should do to increase their privacy and security online. Using a virtual private network (VPN) creates a secure connection to the internet. Users can also use a private browser to prevent their browsing history from being tracked within the browser. Users should set strong passwords and routinely change them to increase their security. Antivirus software is wise to have. It shields the computer from viral attacks and helps keep personal data safe.

Users should protect themselves by avoiding using public wireless networks, public computers, and avoiding oversharing online.

Purpose

Upon completing this project, you will know how to increase your privacy and security online.

Steps for Completion

1. _____ are not secure and should be avoided when accessing sensitive information online.
2. VPN stands for _____.
3. _____ does not allow websites to use cookies stored on your computer to track your browsing history.
4. Explain why it is important to use different passwords for each account.

Fill-in-the-Blanks

Instructions: While watching Domain 2 Lesson 2, fill in the missing words according to the information presented by the instructor. [References are found in the brackets.]

1. Just because something has been deleted online does not mean that it cannot be _____. [Recognize the Permanence of Actions Online]
2. Computer _____ are a set of principles that help users determine what is right or wrong regarding technology. [Legal and Ethical Behavior When Using Technology]
3. Negative communication is not always in words; it could also be demeaning _____. [The Impact of Negative Digital Communication]
4. Cyberbullying and harassment are prevalent among _____, but _____ also suffer from it. [The Impact of Negative Digital Communication]
5. The _____ top-level domain is primarily used for educational institutions. [Assess the Validity of Online Information]
6. When validating information online, users should determine the author's _____ on the topic. [Assess the Validity of Online Information]
7. Online _____ protects one's identity online. [The Importance of Online Anonymity]
8. Choosing not to respond to negative communication is important, especially in a _____ setting. [Nonresponse to Negative Communication]

Online Actions

There are principles online that determine what is right and wrong when it comes to the use of technology. Some principles are merely ethical in nature, while others involve actual legalities. It is important to know that content put online is permanent and can have long-lasting consequences. Users should be wise in what they share online.

Purpose

Upon completing this project, you will recognize the legal, ethical, and permanence of online behavior and content.

Steps for Completion

1. Computer _____ are principles that help us determine what is right or wrong regarding technology.
2. Just because content has been _____ does not mean it is gone and that others cannot access it.
3. Determine if the behaviors below are ethical, unethical, or illegal. Write an E for ethical, U for unethical, and an X for illegal behaviors.
 - a. Using crude language _____
 - b. Distributing copywritten material _____
 - c. Respecting differing reviews _____
 - d. Downloading music without paying _____
 - e. Watching pirated movies online _____
 - f. Pretending to be someone other than yourself _____

Validating Online Information

Anyone can publish content online, even if the information is not credible. Because of this, individuals must validate the information they find. Knowing the web address's top-level domain is a starting place in determining the purpose of the writing. Individuals also need to review the author's credibility and authority on the subject and determine whether there is bias or a motive for providing the information and if the information is current or outdated.

Purpose

Upon completing this project, you will be able to identify top-level domains and ways to validate information online.

Steps for Completion

1. Match the top-level domain with its description.

.org	.net	.edu
.com	.mil	.gov

- Commonly used for commercial purposes but can be used for any type of website _____
 - Used for organizations _____
 - Primarily used for educational institutions _____
 - Used by the U.S. government for the military _____
 - Used by the US federal government _____
 - Commonly used for organizations providing networking _____
2. A good website will include the author's _____ and the _____ the article was published.

Online Anonymity and Negative Communication

Online anonymity protects one's identity online. Anonymity is a beneficial feature online, but it also has its downfalls. It is used to say harmful things that normally wouldn't be stated in person. When this happens, individuals must decide whether to respond. In professional settings, no response is usually the better option.

Purpose

Upon completing this project, you will understand the importance of online anonymity and the value of not responding to negative communication online.

Steps for Completion

1. Why is online anonymity important?

2. Why would you choose not to respond to negative communication?

3.1.1 Define the information required to complete a given task

Relevant Search Results

When performing a search through a search engine, users type one or more keywords. The search engine uses those keywords to pull search results from their database. The more specific the keywords are, the more relevant the search results will be. Users can perform an advanced search or use search operators to refine their search results. Once users have search results, they can continue narrowing down their results before deciding which sites to visit. Users can take the website's top-level domain into account and even preview a few lines of information from the website.

Purpose

Upon completing this project, you will know how to narrow search results to find the most relevant information.

Steps for Completion

1. Open a web browser.
2. Navigate to the search engine of your choosing.
3. Perform a search for results containing information about George Patton's time at the Battle of the Bulge. Use the appropriate search operator so the only battle referenced is the Battle of the Bulge.
4. Take a screenshot with the search bar and search results listed below.
5. Save the screenshot as **312-Completed**

Locating Information Online and in a File

Users can quickly locate information within a webpage by pressing Ctrl+F to open a search box. Users then can type a keyword or words into the box to locate those words within the online content. This is also done within files. The shortcut Ctrl+F opens the Navigation pane and allows users to search for keywords within the document. When searching online or within a document, it is best to be as specific as possible with the keyword or words used.

Purpose

Upon completing this project, you will know how to locate information in a file and a webpage.

Steps for Completion

1. Open the Zion Report.docx file found in your Domain 3 Student folder.
2. Use the Navigation pane to search for the word **cost** in the report.
3. What is the individual price for the trip? _____
4. Close the Zion Report.docx file.
5. Open a web browser.
6. Navigate to **<https://www.biography.com/military-figure/george-patton>**
7. Use the shortcut key Ctrl+F to search the website for when George Patton died.
 - a. Search using the keyword **Death**
8. Take a screenshot of the search box with the keyword Death.

Domain 4 Lesson 1

Fill-in-the-Blanks

Instructions: While watching Domain 4 Lesson 1, fill in the missing words according to the information presented by the instructor. [References are found in the brackets.]

1. The _____ alignment evenly distributes text between the margins. [Proficiency in Creating Basic Documents]
2. Page orientation is determined in Microsoft Word from the _____ tab. [Proficiency in Creating Basic Documents]
3. To save a copy of a document with a different name, select _____. [Proficiency in Creating Basic Documents]

Creating a Document

Users create documents in a word processor. A popular word processor is Microsoft Word. Users can add text by typing on their keyboard. They can modify the text size, color, font, and alignment. Numbered and bulleted lists can also be added. Other modification options include assigning styles, themes, and color and font sets. Users can adjust the margin size, page orientation, and spacing. Many other options are available to customize documents.

To save a document, users select the File menu and then Save As. Users then assign a name to the document and determine the document's file format and storage location.

Purpose

Upon completing this project, you will know how to create and save a document using different features in Microsoft Word.

Steps for Completion

1. Open the **411 Zion Hikes.docx** file found in your Domain 4 Student folder.
2. Add the title **Zion National Park Hikes** at the top of the document.
3. Assign the Title style to the Zion National Park Hikes title.
4. Center align the title.
5. Increase the title's font size to 36pt.
6. Assign the Heading 2 Style to the subheadings Hidden Canyon, Narrows Riverside, Emerald Pools-Upper Pool, and Canyon Overlook.
7. Change the document's theme to the Headlines theme.
8. Change the color set to the color of your choosing.
9. Below the hikes, make a bulleted list including three things you'd bring on the hikes.
10. Change the document's margins to Wide.
11. Save the project as **411-Completed**

Instructions: While watching Domain 4 Lesson 2, fill in the missing words according to the information presented by the instructor. [References are found in the brackets.]

1. To delete a slide in Microsoft PowerPoint, select the slide, _____ it, and select Delete from the menu. [Proficiency in Creating Basic Presentations]
2. Presentation themes in PowerPoint are found on the _____ tab. [Proficiency in Creating Basic Presentations]

Creating a Presentation

Software like Microsoft PowerPoint, or an online alternative, is used to create presentations. Presentations start with a title slide. Users can add additional slides as needed. Users can add text, pictures, animations, and charts to their slides. Users modify text by changing the font, increasing or decreasing the size, changing font color, or underlining, initializing, or bolding the text. Users can determine the alignment of text and other content, add bullets or numbered lists, add themes, and set slide transitions. Many other modification options are available. Options vary depending on the presentation program in use.

To save a presentation, users select the File menu and then Save As. Users then assign a name to the document and determine the document's file format and storage location.

Purpose

Upon completing this project, you will know how to create and save a presentation using features in Microsoft PowerPoint.

Steps for Completion

1. Open Microsoft PowerPoint.
2. Start a blank Presentation.
3. Add the title **Zion National Park** to your slide.
4. Add the subtitle **2020 Adventure** to your slide.
5. Increase the title's font size to 66pt.
6. Add two Title and Content slides to the presentation.
7. Duplicate one of the Title and Content slides.
8. Insert an online picture of your choosing, from Zion National Park, on slide 2.
 - a. Ensure that you are filtering Creative Commons photos.
 - b. Fit the picture to the whole slide.
9. On slide 3, add the title **Hikes**
 - a. Center align the title.
 - b. Change the title's font to a new font of your choosing.
10. List the following hikes: Hidden Canyon, Narrows Riverside, Emerald Pools, and Canyon Overlook.
11. Change the bullet style to Square Filled Bullets.
12. Delete slide 4.
13. Add your favorite theme to the presentation.
14. Save the project as **412-Completed**

4 Content Creation

4.1 Create basic documents and presentations

4.1.2 Display proficiency in creating basic presentations

IC3 GS6 Level 1

Domain 4 Lesson 3

Fill-in-the-Blanks

Instructions: While watching Domain 4 Lesson 3, fill in the missing words according to the information presented by the instructor. [References are found in the brackets.]

1. The Creative Commons _____ condition requires the author or owner to be given credit for their work. [Referencing and Attribution]
2. Using other people's words and ideas as your own is _____. [Referencing and Attribution]
3. Bookmarks and bookmark folders are accessed through the bookmark _____. [Locating and Sourcing Online Citations]
4. _____ allow users to keep a list of websites and provide an easy way to access them later. [Locating and Sourcing Online Citations]
5. Users can create citations with Microsoft Word. This is done from the References tab by selecting the Citation dropdown button and selecting _____. [Locating and Sourcing Online Citations]
6. References are added by selecting the _____ dropdown button and selecting References from the menu. [Locating and Sourcing Online Citations]

Referencing and Attribution

When someone uses another person’s thoughts, ideas, data, or some other form of work, that person should give the author credit; this is known as giving attribution. Users can provide attribution in many ways. A common form is through a citation. Failing to give attribution is dishonest and illegal.

Purpose

Upon completing this project, you will understand why it is essential to give attribution and what is needed to give attribution.

Steps for Completion

- Using other people's words and ideas as your own is _____.
- Giving attribution to an author in your writing is done by _____ their work in your paper.
- References are listed at the _____ of a report.
- _____ are entries in a references list.
- When citing something from a book, what four things are included?

_____.

Objectives covered

4 Content Creation

4.2 Understand accepted referencing and attribution practices

4.2.1 Define referencing and attribution

4.2.2 Explain the purpose of referencing and attribution

Creating a Citation Using a Bookmarked Site

Users can bookmark sites from which they have referenced. Doing this makes locating citation information easier. Websites usually list the author's name, copyrights, and dates near the top of the page or near the bottom.

Microsoft Word provides a citation feature. This feature allows users to input citation information to create in text citations and generate a reference list.

Purpose

Upon completing this project, you will be able to use bookmarked sites to create a citation.

Steps for Completion

1. Open a web browser.
2. Navigate to the Hikespeak website using the URL
<https://www.hikespeak.com/trails/hidden-canyon-hike-zion/>
3. Bookmark the site.
4. Close the web browser.
5. Open the **Zion National Park Hikes.docx** file found in your Domain 4 Student folder.
6. In the first paragraph, find and place your cursor after the quote in the last sentence.
7. Create a website citation for the quoted material using the site that was bookmarked in step 2.
8. Insert the reference on the last blank page.
9. Save the project as **424-Completed**

Domain 4 Lesson 4

Fill-in-the-Blanks

Instructions: While watching Domain 4 Lesson 4, fill in the missing words according to the information presented by the instructor. [References are found in the brackets.]

1. Users should back up their data _____. [Determine How, When, and Where to Back Up Data]
2. Users can back up their data online using a _____ storage provider. [Determine How, When, and Where to Back Up Data]
3. A _____ convention is a systematic way of naming files to keep them organized and make finding them easier. [File Management and Naming Conventions]
4. In portrait orientation, a page's height is _____ than its width. [Portrait vs. Landscape Orientation]
5. In landscape orientation, a page's height is _____ than its width. [Portrait vs. Landscape Orientation]
6. Another word for double-sided printing is _____ printing. [Double-Sided Printing]
7. Using the _____ print option prints the back side of the page upside down. [Double-Sided Printing]
8. _____ copies are printed in order by page number. [Common Print Settings]
9. The shortcut key _____ is used to print from a computer. [Common Print Settings]
10. Users should _____ online PDF files to the computer before printing. [Printing Methods]

Data Backup

Data safety and security are essential. Users should back up their data regularly to ensure data is not lost. There are a variety of storage options available. One popular option includes cloud storage. This option is widely used because of its ease of access and security online.

Purpose

Upon completing this project, you will be familiar with where data can be backed up.

Steps for Completion

1. Data should be backed up _____.
2. List three ways to back up data.
 - a. _____
 - b. _____
 - c. _____
3. List three cloud storage services.
 - a. _____
 - b. _____
 - c. _____
4. To use cloud storage, users must create an _____ with a storage provider.

4.3 Save and back up work

4.3.2 Implement file management principles and naming conventions compatible with a given backup scenario

Double-Sided Printing

When printing documents, users can print single-sided pages or double-sided pages. Single-sided copies print on one side of the paper, while double-sided copies print on both sides. Some printers are only equipped to print on one side. To print double-sided copies, users must manually flip the paper to print on the other side.

Purpose

Upon completing this project, you will know how to perform double-sided printing.

Steps for Completion

1. Printers with _____ capacities can print double-sided copies on their own.
2. The _____ print option allows the reader to flip the paper like a book to read the back side.
3. The _____ print option allows the reader to flip the page up from the bottom to read the back.
4. The _____ print option allows the user to physically flip the paper and feed it back to the printer to print on the other side of the page.
5. When printing a double-sided copy on card stock, the _____ print option is commonly used to allow the user to flip the card stock paper over.

Topic: Fundamental Printing

Concepts

Subtopic: Double-Sided Printing

Objectives covered

4 Content Creation

4.4 Understand fundamental printing concepts

4.4.2 Describe double-sided printing

Print Settings and Options

In addition to the double-sided printing options, users can control collation, orientation, page size, margin size, and the number of pages per single piece of paper on their printouts.

These options are similar when printing online. Users can access print options on the internet by right-clicking the screen and selecting Print from the menu or by selecting the three dots or stacked lines next to the address bar and selecting Print from the menu. Printing this way prints the whole website, including displayed adds. Some websites provide printing options for specific files on their website. Users may need to save these files to their computers before printing them.

Purpose

Upon completing this project, you will be familiar with print settings.

Steps for Completion

1. If you have a report that is three pages long and you print five uncollated copies of it, how will the report print?

_____.
2. Orientation refers to the _____ the paper is facing.
3. Portrait orientation is when the page's height is _____ than its width.
4. Landscape orientation is when the page's height is _____ than its width.
5. The shortcut keys used to print include _____ for PC users and _____ for Mac users.
6. Some websites have PDF files that need to be _____ before they can be printed.
7. Websites may offer a print option for specific items on their website, or users can print the whole _____.

Domain 5 Lesson 1

Fill-in-the-Blanks

Instructions: While watching Domain 5 Lesson 1, fill in the missing words according to the information presented by the instructor. [References are found in the brackets.]

1. _____ are used to post online. [Post or Share in the Digital World]
2. Users should read and understand platform guidelines before _____ to them. [Platform-Specific Guidelines for Posting]
3. _____ usually outline platform-specific rules and consequences for breaking the rules. [Acceptable Use Policies for Posting]
4. Zoom, Google Hangouts, and Skype are all _____ tools. [Implement Digital Interactions]
5. _____ is used to ask simple questions and receive quick responses. [Implement Digital Interactions]
6. _____ is effective for sharing routine information. [Effective and Ineffective Digital Interaction]
7. A _____ is an effective digital interaction method when collaboration is needed. [Effective and Ineffective Digital Interaction]
8. Inclusive language avoids _____ toward people, no matter their race or gender. [Use of Inclusive Language]
9. Bcc stands for _____. [Differentiate Among Email Response Options]
10. _____ sends a response to all the recipients included in the original message. [Differentiate Among Email Response Options]

Platforms and Platform-Specific Guidelines

The internet provides users with the opportunity to post and share online. There are many platforms available to which users can share information. Each platform has its own set of guidelines in which users must agree to follow when posting and sharing on the site. The guidelines may be lengthy, but users should read them and ensure they understand and agree to them.

Purpose

Upon completing this project, you will be familiar with platforms and how to find platform-specific guidelines

Steps for Completion

1. List three platforms that are used to post and share online.
 - a. _____
 - b. _____
 - c. _____
2. Open a web browser and navigate to **www.linkedin.com**
3. Locate LinkedIn's publishing platform guidelines.
4. Take a screenshot displaying the guidelines.
5. Save the screenshot as **512-Completed**

Effective Digital Communication

Many forms of digital communication are available online, from email and instant messaging to video conferences. It is the user's job to determine which form is most effective for the needed communication. When determining what form of communication to use, users should consider the type and amount of information, their audience, and any language or cultural barriers they may encounter.

Purpose

Upon completing this project, you will be able to determine which form of digital communication is most effective in specific situations.

Steps for Completion

1. If you have a quick question that needs to be answered promptly, _____ is the ideal mode of communication.
 2. If the information being shared will require explanations, Q&A, or collaboration, a _____ would be most effective.
 3. If the communication includes a lot of information that may need to be referenced later, _____ is most effective.
 4. Which form of communication can improve the effectiveness of communication if there are language barriers? Why?

Inclusive Language

Inclusive language avoids bias toward people, no matter their race or gender. It aims to include rather than exclude. Users should take care to use inclusive language and avoid any bias, especially in a professional setting.

Purpose

Upon completing this project, you will be able to identify and use inclusive language.

Steps for Completion

Determine if the sentences below are inclusive. Write Yes if it is inclusive and No if it is not in the provided space. If the sentence is not inclusive, rewrite the sentence in an inclusive way.

1. We will find a doctor to ask. He'll know what is wrong with me.

2. Students, today we are going to learn how to add and subtract.

3. We are going to invite each organization's chairman to our fundraiser.

Reviewing and Leaving Feedback

Microsoft Word provides a few different ways for users to review work and provide feedback. One way is to leave comments. Users can select text and then add a comment from the Review tab. From the Review tab, users can utilize the Track Change feature. This feature allows users to make changes within the document and for the original author to view the changes. The author can then decide whether they want to keep or reject the changes.

Word also offers the Compare and Combine features. These allow multiple authors to compare their documents and then combine them into one.

Purpose

Upon completing this project, you will know how to leave feedback within a document.

Steps for Completion

1. Open the **613 Document Review.docx** file found in your Domain 6 Student folder.
2. Add the comment, **Change this to read "Zion National Park"**. to the text "the Park" next to Friday's 8:40am time.
3. Use Track Changes to remove the extra "s" in Majestic next to Friday's 4:15pm time.
4. Save the project as **613-Completed**
5. Coauthors could use the _____ feature in Microsoft Word to merge their separate documents together.
6. Using a share site like OneDrive provides multiple users access to the _____ document from which to work.

Digital Etiquette for Visual Collaboration

When collaborating online in a visual form, individuals must ensure that their appearance is appropriate and is sending the intended message. Individuals use facial expressions, eye contact, body language, tone, and appearance to determine the thoughts and feelings of others. These assumptions are not always correct. Individuals should take care in determining the message their body language, appearance, and tone is sending to others.

Purpose

Upon completing this project, you will be able to determine the message your body language, tone, and appearance is sending to others.

Steps for Completion

1. Fidgeting around or working on other projects during a virtual meeting makes you look _____ and uninterested.
2. Eye contact is important because it helps keep everyone feeling _____ and engaged in the conversation.
3. Lower eye contact gives off the impression that your _____ is lacking.
4. Sitting up with your arms uncrossed and facing the camera conveys that you are _____, comfortable, and engaged in what is being discussed.
5. Crossed arms make you look _____ or insecure.

Instructions: While watching Domain 7 Lesson 1, fill in the missing words according to the information presented by the instructor. [References are found in the brackets.]

1. Cybercriminals use _____ tactics to trick people into giving them their personal information. [Digital Security Threats]
2. _____ often enters a computer through free online downloads. [Digital Security Threats]
3. Strong passwords should consist of uppercase and lowercase letters, _____, and at least one _____. [Features of Secure Passwords]
4. The longer the password length, the _____ it is for cybercriminals to crack. [Features of Secure Passwords]
5. A password should be changed if there is unauthorized _____ to the account. [When and How to Reset a Password]
6. Passwords are commonly reset through account _____. [When and How to Reset a Password]
7. _____ a device protects a user's sensitive data when away from a device. [When and How to Lock a Device]
8. To lock a Windows computer, open the _____, select the account name, and then select: Lock. [When and How to Lock a Device]
9. Clearing browser settings provides added privacy and frees up _____ on a computer. [How to Clear Saved Browser Settings]
10. Browser settings include browsing _____, _____, and cached images and files. [How to Clear Saved Browser Settings]

Cyber Attacks

Cybercriminals use a variety of ways to get into computers and steal personal information. These include phishing, a Trojan horse, spyware, and computer viruses. Users should be familiar with these and know how to protect themselves against these threats.

Purpose

Upon completing this project, you will be familiar with viruses, spyware, Trojan horses, and phishing.

Steps for Completion

Match each cyber threat with its definition.

A. Virus	B. Trojan horse
C. Spyware	D. Phishing

1. This threat is disguised amongst legitimate software. It can delete files, use your computer to hack into other computers, and steal your personally identifiable information. _____
2. Software that spies on the user. It collects personal information and then shares it with third parties. It is commonly downloaded through a free download online and is to blame for pop-up ads. _____
3. A software program that is loaded onto a computer, commonly through an email attachment, outdated software, or from visiting a website. Once this program has been loaded onto the computer, it duplicates itself, spreading and infecting programs and files on the computer, and potentially infecting your whole contact list. _____
4. Tactics used to try and trick users into giving away their personal information. This is done by creating fake email accounts, text messages, and fake websites used to get users to provide confidential information. _____

Locking the Computer

Users should lock their computers and devices when they are away from them to protect their data. Mac users lock their computers through the Apple menu, and Windows users lock their computers through the Start menu. Users lock devices by determining a passcode, pattern, or fingerprint lock. Users do this through the device's settings menu.

Purpose

Upon completing this project, you will know how to lock your computer.

Steps for Completion

1. Navigate to your computer's Lock option.
2. Take a screenshot of the menu open with the Lock option displayed.
3. Save the screenshot as **723-Completed**
4. Lock your computer.
5. Sign in to your computer.

Objectives covered

7 Safety and Security

7.2 Protect devices and digital content

7.2.3 Describe security concerns related to storing information on a device

Clearing Browser Data

Clearing browser data frees up disk space on a computer. It also provides more security because it clears browsing history. Users should routinely clear their browser data through the browser settings. Users can determine the time range of data to delete. They can delete data from the last 24 hours, 7 days, 4 weeks, or all data. Users can also decide what information they want to be cleared. They can clear browsing history, cookies and site data, and cached images and files.

Purpose

Upon completing this project, you will know how to clear your computer's browsing data.

Steps for Completion

1. Open a web browser.
2. Clear the browsing data.
 - a. Include browsing history, cookies and other site data, and cached images and files.
 - b. Clear data for the last 24 hours.
3. Take a screenshot of the Clear browsing data window.
4. Save the project as **724-Completed**
5. Finish clearing the data.

Domain 7 Lesson 2

Fill-in-the-Blanks

Instructions: While watching Domain 7 Lesson 2, fill in the missing words according to the information presented by the instructor. [References are found in the brackets.]

1. _____ uses satellites to transmit signals that determine the location of a device. [How Navigation Tracking Works]
2. Navigation tracking can be used with a _____ tracking system to provide directions to a destination. [How Navigation Tracking Works]
3. If a malicious person gains access to a device using navigation tracking, a user's _____ and common routes are exposed. [Security Concerns with Navigation Tracking]
4. Browsing history and _____ sites provide a hacker with a map of all the sites that have been visited online. [Security Concerns with Navigation Tracking]
5. Hackers can use _____ to gain access to accounts without knowing a user's password. [Security Concerns with Storing Info Online]
6. Private browsing does not store _____ on a device. [The Benefits of Private Mode Browsing]
7. Google Chrome's private browser is accessed by opening an _____ window. [Benefits of Browsing in Private Mode]
8. _____ is the act of a person or people using harmful words or pictures to deliberately cause hurt, embarrassment, and hopelessness or to intimidate another person repeatedly online. [Mental Health Risks]
9. Those who are cyberbullied usually have higher rates of depression, _____, and low self-esteem. [Mental Health Risks]
10. A monitor should be around an arm's length away and at _____ level. [Physical Health Threats]
11. When working on a computer, a user's chair should be positioned so that the user's feet rest comfortably on the _____. [Physical Health Threats]

Navigation Tracking

Navigation tracking uses satellites to transmit signals that determine the location of a device. It is commonly used with a GPS tracking system which is beneficial to users because it provides directions and can identify the device's location. It can be a risk to a user's security as it tracks the user's whereabouts.

Purpose

Upon completing this project, you will understand the benefits of navigation tracking along with some of the security threats they pose.

Steps for Completion

1. List two ways navigation tracking benefits a user.
 - a. _____

 - b. _____

2. Explain some of the security threats that navigation tracking poses to a user.

Objectives covered

7 Safety and Security

7.3 Be aware of data-collection technology

7.3.1 Describe how navigation tracking works

7.3.2 Describe security concerns related to navigation tracking

Stored Information Security Concerns

Stored information on the computer poses security threats. Hackers can use the stored information to view a user's browsing history and gain access to a user's confidential information. Users should clear their browsing data frequently or use a private browser. Users should also never store their passwords or keep credit card information on file for hackers to steal.

Purpose

Upon completing this project, you will understand the security threats that come from storing information on a device and what you can do to combat these threats.

Steps for Completion

1. _____ history and _____ sites provide a hacker with a map of the sites you visit online.
2. _____ can be used by hackers to gain access to an account without even knowing the user's password.
3. Browsing history should be cleared frequently, especially after visiting sites containing _____ information.
4. Users can store passwords and credit card information on the computer. Users can disable these options in the browser's _____.

Objectives covered

7 Safety and Security

7.3 Be aware of data-collection technology

7.3.3 Describe security concerns related to storing information on a device

Private Browsing

Using private browsing mode allows users to increase their security and privacy online because private browsing does not track or leave any browsing traces. It also does not allow websites to use cookies stored on the computer to track the users' browsing history. This keeps sensitive data more secure and prevents others from snooping around the browsing history. Private browsing is available on both computers and mobile devices. Though browsing is not tracked on a device, it is still tracked on the end of the internet service provider or, in the case of a company, the company's network servers.

Purpose

Upon completing this project, you will know how to use private browsing.

Steps for Completion

1. In the Edge browser, private browsing is accessed by opening the _____ window.
2. In the Chrome browser, private browsing is accessed by opening the _____ window.
3. In the Firefox browser, private browsing is accessed by opening the _____ window.
4. Open a web browser.
5. Open a private browsing window.
6. Take a screenshot of your browser in the private browsing mode
7. Save the screenshot as **734-Completed**

7.3.4 Describe the benefits of private mode browsing

Cyberbullying

Cyberbullying is one of online technology's most significant mental health risks. Cyberbullying takes place when a person or people use harmful words or pictures to deliberately cause hurt, embarrassment, hopelessness, or intimidate another person online. Cyberbullying can have very serious negative consequences. The physiological toll it takes on people has even pushed individuals to self-harm or commit suicide.

Purpose

Upon completing this project, you will understand cyberbullying and what to do if you witness or experience it yourself.

Steps for Completion

1. Those who are cyberbullied usually have higher rates of _____, anxiety, and _____ self-esteem.
2. If you are being cyberbullied or witness someone else cyberbullying, save the posts or messages and report the abuse to someone in _____.
3. Social media sites provide ways to _____ or mute people. These can be implemented to block bullies from sending messages.
4. If you are being bullied, talk to someone you _____ about it.

Objectives covered

7 Safety and Security

7.4 Identify health risks associated with the use of digital technologies

7.4.1 Identify mental health risks associated with online technologies

Computer Use Health Threats

Using repetitive motions can cause damage to muscles, nerves, and tendons in an individual's body; this is a repetitive stress injury and can occur from computer and device usage. The best way users can prevent these injuries is to position themselves and their workstations to increase good posture and comfort. Users should also take frequent breaks to give their bodies a break. Standing up, walking around, and looking away from the computer or device screen are all ways to give the body a break.

Purpose

Upon completing this project, you will know the proper way to position your workstation to prevent injury.

Steps for Completion

1. The most common repetitive stress injury from computer and device use is _____.
2. The monitor should be around an _____ length away and at eye level.
3. When the monitor is too close or too far away, it can cause _____.
4. Users should sit straight up in a chair to protect their _____ and _____ while working.
5. Arms should be at a _____ angle, and arms and wrists should be straight when typing.

IC3 GS6 Level 1

Appendix

Glossary

Term	Definition
Android	An operating system used on smartphones and tablets.
Antivirus Application	Software that is used to detect and eliminate computer viruses.
Asynchronous Communication	Communication that does not happen in real time.
Attribution	Giving credit to the author or owner for their work.
Bcc	A blind carbon copy (Bcc) is a method used in an email application to send a message while keeping the identity of the receiver private.
Blog	An online journal that is commonly used to write about one's experiences and opinions, or to give a review.
Bookmark	A way of saving a webpage's address to reference or return to later.
Browser	An application used to access websites on the internet.
Browser History	A list of websites that have been visited on the internet; this includes any data associated with the website and how long the user was on the website.
Cable Internet	Transmits data through a cable television network as a means to connect a computer to the internet.
Cc	A carbon copy (Cc) is a method used in an email application to send a copy of the email to someone. A Cc'd recipient is not required to respond to the message.
Citation	A means of giving credit to a source when their information is used.
Computer Ethics	A set of principles that help users determine what is right or wrong regarding computers.
Computer Virus	A software program that is loaded onto a computer, and then duplicates itself, spreading and infecting programs and files on the computer.
Creative Commons License	A free license used by creators to permit others to use their content, free of charge, as long as they follow the license rules.
Cyberbullying	The deliberate use of harmful words or pictures to cause embarrassment, hopelessness, or repeatedly intimidate another person online.
Desktop Interface	Icons and menus on the computer that allow the user to interact with the operating system.
DSL	A digital subscriber line (DSL) transmits data digitally over phone lines.
Email	A method of communication used to send electronic messages using the internet.
Ethernet Cable	The cable used to connect computers in a network. An Ethernet cable allows data to be transferred from one computer to another.
Font	A typeset that has a particular face and size.
Hardware	Physical components of a computer system such as a keyboard, mouse, or modem.
HTML	Hypertext Markup Language (HTML) is used to mark a webpage's structure using tags so that the web browser displays the content correctly.
Instant Messaging	A means of text transmission sent in real time over the internet.
Internet	A network of computers that provides access to information on the web.
Intranet	A restricted private network used by organizations to communicate.
Malware	A virus or Trojan horse designed to cause harm to a computer or device.
Modem	A device that translates analog carrier signals to encode and decode digital information.

Term	Definition
Naming Convention	A chosen method for organizing and naming files and folders.
Navigation Tracking	A tool that provides directions using satellites.
Network	Computers that are connected through cable or Wi-Fi to share resources.
Network Adapter	Hardware that is used to connect a computer to another computer or server over a local area network.
Online Anonymity	The state of being anonymous online.
Open Source	Software that can be modified and distributed to others.
Operating System	Software that manages all of the installed applications and hardware on a computer or device.
Page Orientation	How a document is displayed on a screen or in printed form.
Password	A secret set of characters that are used to access a computer system or service.
Personal Identifiable Information	Information that can be used to distinguish or track a person's identity.
Phishing	A malicious attack that uses email, text messaging, and websites to gather sensitive information about people.
Plagiarism	Using another person's work as your own.
Private Browsing	A way to access websites on the internet without being tracked.
Proprietary	Software that the owner maintains exclusive control over how it is modified and distributed.
Public Domain	Content that is not owned by any individual or company and that is free to use.
RAM	Random-access memory (RAM) uses volatile memory to store information as long as the computer has a power source.
Repetitive Stress Injuries	Repetitive motions that cause damage to muscles, nerves, and tendons in the body.
Reply	An email response method used to send a response to the original sender.
Reply All	An email response method used to send a response to everyone included in the original message.
ROM	Read-only memory (ROM) is volatile memory that stores information even without power.
Router	A device used to transmit data packets from one computer network to another.
Search Engine	Software used to search a database using keywords or phrases entered by the user.
Search Operators	Commands and special characters used to refine search engine results.
Session	The time a user spends on a website. The time (session) is used to measure that website's traffic.
Spyware	A malicious software program that spies on the user and shares the information with a third party.
Start Button	A button on a Windows operating system desktop that allows users to access computer programs, files, and settings.
Synchronous Communication	Communication that happens in real time.
Toolbar	An element on a computer's desktop where buttons, icons, menus, and other elements are placed.
Trojan Horse	A malicious program that is disguised as something else. Trojan horses may be used to steal or destroy data, crash systems, or replicate to other systems.
USB	A universal serial bus (USB) is used to connect devices like printers, keyboards, external storage, and digital cameras to computers.
Video Conference	A means of communication using video and audio to speak in real time with others over the internet.
Virtual Assistant	An application that completes tasks based on the voice commands it is given by a user.

Term	Definition
VPN	A virtual private network (VPN) is a computer network that can help create a secure connection to the internet.
Wi-Fi	A wireless connection to the internet.

Keyboard Shortcuts for Windows

Tool	Shortcut
Cut	Ctrl+X
Copy	Ctrl+C
Paste	Ctrl+V
Undo	Ctrl+Z
Switch between open apps	Alt+Tab
Find	Ctrl+F
Select All	Ctrl+A
New file or window	Ctrl+N
Print	Ctrl+P
